

Classification Governance Module (CGM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Foundation Standard (CFS)
Operational Layer: Classification Foundation Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Governance
Version: 1.0
Status: Canonical · Open Module
Origin Date: 3 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Governance

Canonical Definition

Classification Governance Module defines the governance framework for directing, controlling, supervising, maintaining, and continuously improving the governance of classification activities throughout their complete lifecycle. It establishes governance authority, governance responsibilities, decision-making mechanisms, oversight procedures, governance controls, and continuous governance improvement necessary to ensure that all classification activities remain accountable, transparent, consistent, auditable, and methodologically valid.

Operational Role

Classification Governance Module governs the governance layer of classification by ensuring that classification activities remain properly authorized, supervised, documented, accountable, and continuously managed according to approved governance principles and methodological requirements.

Minimum Implementation Framework

1. Define Governance Requirements

Establish governance objectives, governance authorities, organizational responsibilities, decision rights, oversight mechanisms, governance policies, and acceptance conditions.

2. Define Governance Methodology

Develop standardized procedures for governing classification activities, assigning governance responsibilities, managing governance decisions, supervising classification operations, and documenting governance actions.

3. Define Governance Validation Logic

Verify that classification governance remains accountable, transparent, governance-compliant, methodologically consistent, independently reviewable, and continuously effective throughout the complete classification lifecycle.

4. Define Governance Response

Establish procedures for governance deficiencies, policy violations, unauthorized classification activities, governance exceptions, corrective actions, governance escalation, and continuous governance improvement.

5. Preserve Governance Records

Maintain governance policies, authority assignments, governance decisions, oversight reports, validation records, corrective actions, approval history, timestamps, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — Enterprise Classification Governance

Scenario

A global enterprise establishes a governance board responsible for overseeing classification methodology across multiple business units.

Application

Classification Governance Module governs governance responsibilities, approval processes, oversight mechanisms, and accountability for all classification activities.

Result

Classification governance becomes accountable, transparent, consistently managed, and independently auditable across the complete enterprise.

Use Case 2 — National AI Classification Authority

Scenario

A national authority establishes governance over the classification of AI systems used in critical infrastructure.

Application

Classification Governance Module governs governance authority, policy enforcement, oversight activities, decision-making responsibilities, and continuous supervision of classification operations.

Result

Classification governance remains trustworthy, accountable, transparent, methodologically consistent, and independently verifiable across national regulatory environments.

Canonical Closing Statement

Classification Governance Module establishes the canonical governance framework for directing and supervising classification throughout its complete lifecycle. By governing governance authority, responsibilities, oversight mechanisms, decision processes, governance controls, and continuous governance improvement, the module enables accountable classification, operational transparency, methodological integrity, and trustworthy governance across all operational domains.
