

Classification Methodology Module (CMM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Foundation Standard (CFS)
Operational Layer: Classification Foundation Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Methodology
Version: 1.0
Status: Canonical · Open Module
Origin Date: 3 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Methodology

Canonical Definition

Classification Methodology Module defines the governance framework for designing, documenting, implementing, maintaining, and continuously improving the methodology used to perform governed classification. It establishes methodological processes, governance controls, implementation procedures, validation mechanisms, consistency requirements, and continuous improvement principles necessary to ensure that classification activities remain objective, repeatable, explainable, reproducible, and methodologically valid throughout their complete lifecycle.

Operational Role

Classification Methodology Module governs the methodology layer of classification governance by ensuring that every classification follows a standardized, documented, governance-approved, and independently reproducible methodological process.

Minimum Implementation Framework

1. Define Classification Methodology

Establish the classification methodology, governance objectives, operational procedures, implementation rules, responsible authorities, and methodological acceptance criteria.

2. Define Methodology Documentation

Develop standardized documentation describing every methodological step, governance requirement, decision point, validation activity, and implementation procedure supporting classification.

3. Define Methodology Validation Logic

Verify that the classification methodology remains objective, complete, governance-compliant, consistently executable, independently reproducible, and suitable for all intended operational environments.

4. Define Governance Response

Establish procedures for methodological deficiencies, governance exceptions, process improvements, corrective actions, methodology revisions, and continuous methodological optimization.

5. Preserve Methodology Records

Maintain methodology documentation, governance approvals, validation reports, implementation history, revision records, decision logs, timestamps, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — Enterprise Data Classification

Scenario

A multinational organization develops a standardized methodology for classifying business information across all departments.

Application

Classification Methodology Module governs the documentation, implementation, validation, and continuous improvement of the classification methodology before operational deployment.

Result

Classification activities become standardized, reproducible, governance-compliant, and consistently executed across the entire enterprise.

Use Case 2 — AI Model Classification

Scenario

An AI governance organization develops a methodology for classifying AI models according to operational characteristics and governance requirements.

Application

Classification Methodology Module governs the creation and validation of a common classification methodology applied consistently across all evaluated AI models.

Result

AI model classifications remain objective, explainable, methodologically consistent, and independently reproducible across different assessment teams.

Canonical Closing Statement

Classification Methodology Module establishes the canonical governance framework for performing governed classification through standardized methodology. By governing methodological design, implementation procedures, governance controls, validation mechanisms, documentation, and continuous improvement, the module enables objective classification, methodological consistency, operational reliability, and trustworthy governance across all operational domains.
