

Classification Intelligence Standard (CIS)

OriginID: OOF-OID-CLA-CIS-2026-08-05-0009

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: CLA™ — Classification Architecture

Operational Layer: Classification Intelligence Governance Layer

Category: Governance & Classification

Subcategory: Classification Governance

Type: Parent Standard

Governed Space: Classification Intelligence

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 5 August 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® ·

ORA™ · AGA™ · AIG® · CLIA® ·

MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP® — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Classification Intelligence

Core Question

How can classifications become governed sources of reliable operational intelligence that support consistent analysis, reasoning, prediction, automation, and decision-making?

Canonical Definition

Classification Intelligence Standard defines the governance conditions required to transform classifications into trustworthy operational intelligence throughout their complete lifecycle. It establishes intelligence methodology, governance controls, analytical principles, reasoning mechanisms, intelligence validation, operational interpretation, and continuous intelligence governance necessary to ensure that classifications generate reliable, explainable, consistent, and independently verifiable intelligence for human and autonomous decision-making.

Governance Flow Position

Classification Foundation → Classification Criteria → Classification Decision → Classification Integrity → Classification Validation → Classification Lifecycle → Classification Registry → Classification Interoperability → Classification Intelligence → Classification Assurance

Standard Abstract

Classifications should not exist merely as organized categories.

When properly governed, they become structured intelligence that enables analysis, reasoning, automation, prediction, operational understanding, and informed decision-making.

Classification Intelligence Standard establishes the governance framework that transforms classifications into trustworthy intelligence assets while preserving explainability, consistency, governance integrity, and operational reliability.

Operational Role

Classification Intelligence Standard governs the intelligence layer of classification governance by establishing standardized methods for analytical interpretation, reasoning, operational insight generation, decision support, intelligence validation, and continuous intelligence governance.

Operational Space

Classification Intelligence Standard governs:

- classification intelligence,
 - analytical interpretation,
 - classification reasoning,
 - decision support,
 - intelligence validation,
 - operational insight,
 - intelligence governance.
-

Why This Standard Exists

Organizations increasingly depend on classifications not only for organization but also for operational analysis, AI reasoning, automation, prediction, and governance decisions.

Without governed intelligence, classifications may produce inconsistent conclusions, unreliable interpretations, or non-repeatable operational outcomes.

Classification Intelligence Standard exists because **Classification**

Intelligence represents the **ninth governed space** of **CLA™** — **Classification Architecture**, transforming classifications into governed and trustworthy intelligence assets.

Scope

This standard may be applied across:

- AI systems,
 - autonomous systems,
 - cybersecurity,
 - digital forensics,
 - financial services,
 - healthcare,
 - industrial operations,
 - regulatory compliance,
 - critical infrastructure,
 - digital identities,
 - operational governance,
 - and any governed environment requiring classification-driven intelligence.
-

Relationship to Other OOF Architectures

Classification Intelligence Standard interoperates with:

- **GOA™**
- **OBIDENTITY®**
- **INTEGROS®**
- **ORA™**
- **AGA™**
- **AIG®**
- **CLIA®**
- **MGIA™**
- **ASGA™**
- **RIS™**

by providing the canonical methodology for transforming governed classifications into explainable, reliable, and operationally trustworthy intelligence.

Foundational Principle

A governed classification should generate governed intelligence.

Canonical Closing Statement

Classification Intelligence Standard establishes the canonical governance framework for transforming classifications into trustworthy operational intelligence. By governing intelligence methodology, analytical interpretation, reasoning, decision support, validation, and continuous intelligence governance, the standard enables trustworthy classification intelligence, operational confidence, accountable governance, and independent verification across all operational domains.
