

Classification Activation Module (CAM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Lifecycle Standard (CLS)
Operational Layer: Classification Lifecycle Governance Layer
Category: Governance & Classification
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Activation
Version: 1.0
Status: Canonical · Open Module
Origin Date: 4 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP® — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Activation

Canonical Definition

Classification Activation Module defines the governance framework for authorizing, controlling, and documenting the operational activation of classifications. It establishes activation methodology, governance controls, authorization requirements, activation validation, and activation traceability necessary to ensure that classifications become operational only after satisfying all required governance, validation, and approval conditions.

Operational Role

Classification Activation Module governs the activation layer of classification lifecycle governance by ensuring that classifications are formally authorized, validated, documented, and approved before entering operational use.

Minimum Implementation Framework

1. Define Activation Requirements

Establish activation objectives, governance requirements, authorization criteria, responsible authorities, approval conditions, and operational readiness requirements.

2. Define Activation Methodology

Develop standardized procedures for initiating, reviewing, approving, documenting, and activating classifications for operational use.

3. Define Activation Validation Logic

Verify that classifications satisfy all required governance controls, validation requirements, approval conditions, operational readiness criteria, and supporting documentation before activation.

4. Define Governance Response

Establish procedures for failed activations, incomplete approvals, governance exceptions, activation delays, reassessment requirements, and corrective actions.

5. Preserve Activation Records

Maintain activation approvals, governance decisions, supporting documentation, validation reports, timestamps, responsible authorities, and complete audit trails throughout the classification lifecycle.

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform introduces a newly validated classification model into production.

Application

Classification Activation Module governs authorization, validation, governance approval, and operational readiness before the new classification becomes active.

Result

Only fully approved and governance-compliant classifications become operationally active, reducing operational risk and ensuring consistent governance.

Use Case 2 — Regulatory Classification Deployment

Scenario

A regulatory authority publishes a new official classification framework for use across regulated organizations.

Application

Classification Activation Module governs formal approval, implementation authorization, governance verification, and activation of the new classification framework.

Result

The classification framework becomes operational through a controlled, transparent, and independently verifiable activation process.

Canonical Closing Statement

Classification Activation Module establishes the canonical governance framework for activating classifications throughout their operational lifecycle. By governing activation methodology, authorization, governance controls, validation, approval, and activation traceability, the module enables trustworthy classification deployment, operational readiness, accountable governance, and independent verification across all operational domains.
