

Classification Change Module (CCM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Lifecycle Standard (CLS)
Operational Layer: Classification Lifecycle Governance Layer
Category: Governance & Classification
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Change
Version: 1.0
Status: Canonical · Open Module
Origin Date: 4 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP® — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Change

Canonical Definition

Classification Change Module defines the governance framework for requesting, evaluating, approving, implementing, and documenting changes to classifications throughout their complete lifecycle. It establishes change methodology, governance controls, impact assessment, approval mechanisms, and change traceability necessary to ensure that every classification change is justified, controlled, transparent, reproducible, and independently verifiable.

Operational Role

Classification Change Module governs the change management layer of classification lifecycle governance by ensuring that modifications to classifications are systematically evaluated, authorized, implemented, and documented under controlled governance.

Minimum Implementation Framework

1. Define Change Requirements

Establish change objectives, governance requirements, change criteria, responsible authorities, approval conditions, and impact assessment requirements.

2. Define Change Methodology

Develop standardized procedures for requesting, evaluating, approving, implementing, documenting, and communicating classification changes.

3. Define Change Validation Logic

Verify that proposed classification changes are justified by sufficient evidence, satisfy governance requirements, successfully complete impact assessment, and receive all required approvals before implementation.

4. Define Governance Response

Establish procedures for rejected changes, emergency changes, governance exceptions, reassessment requirements, rollback procedures, and corrective actions.

5. Preserve Change Records

Maintain change requests, impact assessments, governance approvals, implementation records, validation reports, timestamps, responsible authorities, and complete audit trails throughout the classification lifecycle.

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform requires modification of an operational classification due to newly discovered environmental conditions.

Application

Classification Change Module governs evaluation of the proposed change, impact assessment, governance approval, implementation, and complete documentation before the updated classification becomes operational.

Result

Classification changes remain controlled, transparent, traceable, and operationally reliable without compromising governance integrity.

Use Case 2 — Regulatory Classification Update

Scenario

A regulatory authority updates an existing classification framework following changes in legislation.

Application

Classification Change Module governs formal change requests, governance review, impact assessment, implementation approval, and documentation of the revised classification.

Result

Classification updates become fully governed, transparent, reproducible, and independently verifiable across regulated environments.

Canonical Closing Statement

Classification Change Module establishes the canonical governance framework for managing classification changes throughout their complete lifecycle. By governing change methodology, impact assessment, governance controls, approval mechanisms, implementation, and change traceability, the module enables trustworthy classification evolution, operational continuity, accountable governance, and independent verification across all operational domains.
