

Classification Lifecycle Standard (CLS)

OriginID: OOF-OID-CLA-CLS-2026-08-04-0006
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Operational Layer: Classification Lifecycle Governance Layer
Category: Governance & Classification
Subcategory: Classification Governance
Type: Parent Standard
Governed Space: Classification Lifecycle
Version: 1.0
Status: Canonical · Open Standard
Origin Date: 4 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP® — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Lifecycle

Core Question

How can classifications remain governed, current, controlled, and traceable throughout their complete lifecycle?

Canonical Definition

Classification Lifecycle Standard defines the governance conditions required to manage, control, monitor, update, and retire classifications throughout their complete lifecycle. It establishes lifecycle methodology, governance controls, change management principles, version governance, monitoring mechanisms, and retirement procedures necessary to ensure that classifications remain accurate, current, traceable, operationally relevant, and independently verifiable from creation through retirement.

Governance Flow Position

Classification Foundation → Classification Criteria → Classification Decision → Classification Integrity → Classification Validation →

Standard Abstract

Creating and validating a classification does not guarantee that it will remain accurate or operationally relevant over time.

Classifications evolve as systems, regulations, knowledge, environments, and operational conditions change.

Classification Lifecycle Standard establishes the governance framework required to manage the complete lifecycle of classifications, ensuring they remain controlled, traceable, current, and suitable for continued operational use.

Operational Role

Classification Lifecycle Standard governs the lifecycle layer of classification governance by establishing standardized methods for activating, maintaining, updating, versioning, monitoring, retiring, and preserving classifications throughout their complete operational lifecycle.

Operational Space

Classification Lifecycle Standard governs:

- classification activation,
 - classification lifecycle,
 - classification change,
 - classification versioning,
 - classification retirement,
 - lifecycle monitoring,
 - lifecycle governance.
-

Why This Standard Exists

A validated classification may become outdated, obsolete, or operationally incorrect as conditions change.

Without lifecycle governance, organizations risk relying on classifications that no longer reflect current reality, introducing operational inconsistency, governance failures, and decision-making risks.

Classification Lifecycle Standard exists because **Classification Lifecycle** represents the **sixth governed space** of **CLA™** — **Classification Architecture**, ensuring that classifications remain

governed throughout their complete lifecycle.

Scope

This standard may be applied across:

- AI systems,
 - autonomous systems,
 - cybersecurity,
 - digital forensics,
 - financial services,
 - healthcare,
 - industrial operations,
 - regulatory compliance,
 - critical infrastructure,
 - digital identities,
 - operational governance,
 - and any governed environment requiring lifecycle governance of classification systems.
-

Relationship to Other OOF Architectures

Classification Lifecycle Standard interoperates with:

- **GOA™**
- **OBIDENTITY®**
- **INTEGROS®**
- **ORA™**
- **AGA™**
- **AIG®**
- **CLIA®**
- **MGIA™**
- **ASGA™**
- **RIS™**

by providing the canonical methodology for governing classifications throughout their complete operational lifecycle.

Foundational Principle

A trustworthy classification must remain governed throughout its entire lifecycle.

Canonical Closing Statement

Classification Lifecycle Standard establishes the canonical governance framework for managing the complete lifecycle of

classifications. By governing lifecycle methodology, activation, change management, version governance, monitoring, retirement, and continuous lifecycle governance, the standard enables trustworthy classifications, operational continuity, accountable governance, and independent verification across all operational domains.
