

Classification Organization Module (COM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Registry Standard (CRS)
Operational Layer: Classification Registry Governance Layer
Category: Governance & Classification
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Organization
Version: 1.0
Status: Canonical · Open Module
Origin Date: 5 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP® — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Organization

Canonical Definition

Classification Organization Module defines the governance framework for organizing classifications within an authoritative registry. It establishes organizational methodology, governance controls, structural hierarchy, categorization principles, relationship management, and organizational consistency necessary to ensure that classifications remain logically structured, easily navigable, operationally manageable, and independently verifiable.

Operational Role

Classification Organization Module governs the organizational layer of classification registry governance by ensuring that classifications are arranged according to standardized structures, logical hierarchies, governance relationships, and consistent organizational principles.

Minimum Implementation Framework

1. Define Organization Requirements

Establish organizational objectives, governance requirements, hierarchy rules, categorization principles, responsible authorities, and organizational consistency requirements.

2. Define Organization Methodology

Develop standardized procedures for organizing classifications, establishing hierarchical relationships, grouping related classifications, documenting organizational structures, and maintaining registry consistency.

3. Define Organization Validation Logic

Verify that classifications are organized according to approved governance structures, logical hierarchies, categorization rules, relationship requirements, and operational objectives.

4. Define Governance Response

Establish procedures for organizational conflicts, structural inconsistencies, governance exceptions, reorganization requirements, corrective actions, and organizational improvements.

5. Preserve Organization Records

Maintain organizational structures, hierarchy definitions, governance approvals, relationship mappings, validation reports, timestamps, responsible authorities, and complete audit trails throughout the registry lifecycle.

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform maintains thousands of classifications that must be grouped into logical governance categories and hierarchical structures.

Application

Classification Organization Module governs organizational design, hierarchical relationships, category management, governance consistency, and registry structure maintenance.

Result

The classification registry remains logically organized, scalable, easy to navigate, and operationally efficient.

Use Case 2 — Regulatory Classification Registry

Scenario

A regulatory authority organizes national classification frameworks into standardized governance categories and hierarchical structures.

Application

Classification Organization Module governs registry organization, category management, structural consistency, governance validation, and long-term organizational maintenance.

Result

The registry remains structured, transparent, operationally manageable, and independently verifiable across all regulatory environments.

Canonical Closing Statement

Classification Organization Module establishes the canonical governance framework for organizing classifications within authoritative registries. By governing organizational methodology, structural hierarchy, categorization principles, governance controls, relationship management, and organizational consistency, the module enables trustworthy classification organization, operational continuity, accountable governance, and independent verification across all operational domains.
