

Classification Registration Module (CRM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Registry Standard (CRS)
Operational Layer: Classification Registry Governance Layer
Category: Governance & Classification
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Registration
Version: 1.0
Status: Canonical · Open Module
Origin Date: 5 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP® — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Registration

Canonical Definition

Classification Registration Module defines the governance framework for registering classifications within an authoritative registry. It establishes registration methodology, governance controls, registration requirements, approval procedures, and registration traceability necessary to ensure that every classification is formally recorded, uniquely recognized, governance-compliant, and independently verifiable before becoming part of the official registry.

Operational Role

Classification Registration Module governs the registration layer of classification registry governance by ensuring that every classification is properly documented, approved, recorded, and governed before entering the authoritative registry.

Minimum Implementation Framework

1. Define Registration Requirements

Establish registration objectives, governance requirements, mandatory metadata, registration criteria, responsible authorities, and approval conditions.

2. Define Registration Methodology

Develop standardized procedures for submitting, reviewing, approving, recording, and documenting classifications within the registry.

3. Define Registration Validation Logic

Verify that every classification satisfies registration requirements, governance controls, documentation standards, approval conditions, and registry policies before registration.

4. Define Governance Response

Establish procedures for rejected registrations, incomplete submissions, governance exceptions, reassessment requirements, corrective actions, and registration appeals.

5. Preserve Registration Records

Maintain registration records, governance approvals, supporting documentation, validation reports, timestamps, responsible authorities, and complete audit trails throughout the registry lifecycle.

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform introduces a newly approved operational classification that must be added to the central classification registry.

Application

Classification Registration Module governs registration review, governance validation, approval, documentation, and formal entry into the registry.

Result

Every operational classification becomes officially registered, traceable, governance-compliant, and independently verifiable.

Use Case 2 — Regulatory Classification Registry

Scenario

A regulatory authority registers a newly approved classification framework for nationwide regulatory use.

Application

Classification Registration Module governs registration approval, documentation, governance validation, registry entry, and long-term preservation.

Result

The classification becomes an officially registered, authoritative, and transparent reference available for regulated organizations.

Canonical Closing Statement

Classification Registration Module establishes the canonical governance framework for registering classifications within authoritative registries. By governing registration methodology, governance controls, approval procedures, documentation, validation, and registration traceability, the module enables trustworthy classification registration, operational continuity, accountable governance, and independent verification across all operational domains.
