

Classification Registry Management Module (CRMM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Registry Standard (CRS)
Operational Layer: Classification Registry Governance Layer
Category: Governance & Classification
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Registry Management
Version: 1.0
Status: Canonical · Open Module
Origin Date: 5 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP® — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Registry Management

Canonical Definition

Classification Registry Management Module defines the governance framework for administering, maintaining, monitoring, and continuously improving the complete classification registry throughout its lifecycle. It establishes registry management methodology, governance controls, operational maintenance, lifecycle administration, performance monitoring, and continuous improvement mechanisms necessary to ensure that the registry remains accurate, reliable, scalable, secure, and independently verifiable.

Operational Role

Classification Registry Management Module governs the management layer of classification registry governance by ensuring that the registry remains operationally maintained, governance-compliant, continuously monitored, and capable of supporting long-term classification governance.

Minimum Implementation Framework

1. Define Registry Management Requirements

Establish registry management objectives, governance requirements, operational responsibilities, maintenance policies, performance expectations, and lifecycle management requirements.

2. Define Registry Management Methodology

Develop standardized procedures for maintaining registry operations, administering classification records, monitoring registry performance, managing lifecycle activities, and documenting management decisions.

3. Define Registry Management Validation Logic

Verify that registry operations remain governance-compliant, operationally reliable, continuously maintained, performance-optimized, and consistent with established management requirements.

4. Define Governance Response

Establish procedures for registry failures, operational deficiencies, governance exceptions, maintenance activities, corrective actions, recovery procedures, and continuous improvement initiatives.

5. Preserve Registry Management Records

Maintain maintenance logs, governance decisions, lifecycle records, performance reports, validation history, timestamps, responsible authorities, and complete audit trails throughout the registry lifecycle.

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform operates a continuously evolving registry containing thousands of operational classifications.

Application

Classification Registry Management Module governs registry administration, operational maintenance, lifecycle management, performance monitoring, and governance oversight.

Result

The registry remains reliable, scalable, continuously maintained, governance-compliant, and operationally trustworthy.

Use Case 2 — Regulatory Classification Registry

Scenario

A national regulatory authority maintains an official registry of approved classifications that must remain accurate and continuously available.

Application

Classification Registry Management Module governs registry administration, maintenance procedures, operational monitoring, governance compliance, and continuous improvement.

Result

The regulatory registry remains authoritative, operationally stable, continuously governed, and independently verifiable throughout its complete lifecycle.

Canonical Closing Statement

Classification Registry Management Module establishes the canonical governance framework for administering and maintaining authoritative classification registries. By governing registry management methodology, operational maintenance, lifecycle administration, governance controls, performance monitoring, and continuous improvement, the module enables trustworthy registry operations, operational continuity, accountable governance, and independent verification across all operational domains.
