

Classification Registry Standard (CRS)

OriginID: OOF-OID-CLA-CRS-2026-08-05-0007
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Operational Layer: Classification Registry Governance Layer
Category: Governance & Classification
Subcategory: Classification Governance
Type: Parent Standard
Governed Space: Classification Registry
Version: 1.0
Status: Canonical · Open Standard
Origin Date: 5 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP® — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Registry

Core Question

How can classifications be centrally registered, uniquely identified, governed, discovered, and managed throughout their complete operational lifecycle?

Canonical Definition

Classification Registry Standard defines the governance conditions required to register, identify, organize, maintain, discover, and govern classifications within a centralized registry throughout their complete lifecycle. It establishes registry methodology, governance controls, registration principles, unique identification, registry integrity, discovery mechanisms, and registry management necessary to ensure that every classification remains uniquely identifiable, traceable, accessible, governed, and independently verifiable.

Governance Flow Position

Classification Foundation → Classification Criteria → Classification Decision → Classification Integrity → Classification Validation → Classification Lifecycle → Classification Registry → Classification Interoperability → Classification Intelligence → Classification Assurance

Standard Abstract

Creating, validating, and maintaining classifications is insufficient unless they can be centrally managed and uniquely identified.

Organizations require a governed registry that enables discovery, traceability, version control, operational management, and authoritative reference for every classification.

Classification Registry Standard establishes the governance framework for managing classifications through a centralized registry that preserves integrity, discoverability, continuity, and long-term operational governance.

Operational Role

Classification Registry Standard governs the registry layer of classification governance by establishing standardized methods for registering, uniquely identifying, organizing, maintaining, discovering, and managing classifications throughout their complete lifecycle.

Operational Space

Classification Registry Standard governs:

- classification registration,
 - classification registry,
 - classification identification,
 - registry organization,
 - classification discovery,
 - registry maintenance,
 - registry governance.
-

Why This Standard Exists

Without a governed registry, classifications become difficult to locate, identify, manage, compare, reuse, and audit.

Organizations require a single authoritative source that preserves classification integrity, operational continuity, traceability, and governance consistency.

Classification Registry Standard exists because **Classification Registry** represents the **seventh governed space** of **CLA™** — **Classification Architecture**, providing the authoritative governance layer for classification registration and registry management.

Scope

This standard may be applied across:

- AI systems,
 - autonomous systems,
 - cybersecurity,
 - digital forensics,
 - financial services,
 - healthcare,
 - industrial operations,
 - regulatory compliance,
 - critical infrastructure,
 - digital identities,
 - operational governance,
 - and any governed environment requiring centralized classification management.
-

Relationship to Other OOF Architectures

Classification Registry Standard interoperates with:

- **GOA™**
- **OBIDENTITY®**
- **INTEGROS®**
- **ORA™**
- **AGA™**
- **AIG®**
- **CLIA®**
- **MGIA™**
- **ASGA™**
- **RIS™**

by providing the canonical methodology for governing centralized classification registries, unique identification, discoverability, traceability, and long-term registry management.

Foundational Principle

A trustworthy classification requires a trustworthy registry.

Canonical Closing Statement

Classification Registry Standard establishes the canonical governance framework for managing centralized classification registries. By governing registration methodology, unique identification, registry organization, discoverability, registry maintenance, and continuous registry governance, the standard enables trustworthy classification management, operational continuity, accountable governance, and independent verification across all operational domains.
