

Classification Applicability Module (CAM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Scope Standard (CSS)
Operational Layer: Classification Scope Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Applicability
Version: 1.0
Status: Canonical · Open Module
Origin Date: 3 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Applicability

Canonical Definition

Classification Applicability Module defines the governance framework for determining, validating, and continuously managing when, where, and under which conditions classification methodology legitimately applies. It establishes applicability rules, governance conditions, eligibility requirements, operational constraints, validation mechanisms, and continuous applicability management necessary to ensure that classification is performed only on entities, objects, processes, systems, events, or information that satisfy approved governance conditions.

Operational Role

Classification Applicability Module governs the applicability layer of classification governance by ensuring that classification is applied only where governance-approved conditions, operational requirements, and methodological criteria have been objectively satisfied.

Minimum Implementation Framework

1. Define Applicability Requirements

Establish applicability conditions, eligibility rules, governance requirements, operational constraints, responsible authorities, and applicability acceptance criteria.

2. Define Applicability Methodology

Develop standardized procedures for determining, documenting, reviewing, validating, and maintaining classification applicability across the complete classification lifecycle.

3. Define Applicability Validation Logic

Verify that classification applicability remains objective, governance-compliant, methodologically consistent, operationally appropriate, and independently reproducible before classification begins.

4. Define Governance Response

Establish procedures for invalid applicability, governance exceptions, eligibility conflicts, applicability revisions, corrective actions, reassessment activities, and continuous applicability improvement.

5. Preserve Applicability Records

Maintain applicability assessments, governance approvals, validation reports, eligibility decisions, supporting documentation, timestamps, revision history, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — Medical AI Classification

Scenario

A healthcare organization determines whether a newly developed AI diagnostic system falls within its regulated AI classification framework.

Application

Classification Applicability Module governs the evaluation of eligibility requirements, governance conditions, operational constraints, and applicability rules before classification begins.

Result

Only governance-eligible AI systems enter the classification process, ensuring objective, consistent, and methodologically valid classification.

Use Case 2 — Enterprise Asset Classification

Scenario

A multinational organization determines which digital assets require classification under its enterprise information governance policy.

Application

Classification Applicability Module governs the assessment of applicability rules, governance requirements, operational conditions, and eligibility criteria before assets are classified.

Result

Classification activities remain properly scoped, governance-compliant, operationally appropriate, and consistently applied across the organization.

Canonical Closing Statement

Classification Applicability Module establishes the canonical governance framework for determining where classification legitimately applies. By governing applicability methodology, eligibility requirements, governance conditions, validation mechanisms, operational constraints, and continuous applicability management, the module enables objective classification, methodological consistency, governance clarity, and trustworthy classification across all operational domains.
