

Classification Change Management Module (CCMM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Scope Standard (CSS)
Operational Layer: Classification Scope Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Change Management
Version: 1.0
Status: Canonical · Open Module
Origin Date: 3 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Change Management

Canonical Definition

Classification Change Management Module defines the governance framework for managing, evaluating, approving, implementing, documenting, and continuously monitoring changes affecting the classification scope throughout its complete lifecycle. It establishes change methodology, governance controls, impact assessment, approval mechanisms, validation procedures, and continuous change governance necessary to ensure that classification scope evolves in a controlled, transparent, consistent, and independently verifiable manner.

Operational Role

Classification Change Management Module governs the change layer of classification scope governance by ensuring that every modification to the governed classification scope is properly evaluated, approved, documented, validated, and preserved before becoming operational.

Minimum Implementation Framework

1. Define Change Requirements

Establish change objectives, governance requirements, approval authorities, impact criteria, documentation requirements, and acceptance conditions.

2. Define Change Methodology

Develop standardized procedures for requesting, evaluating, approving, implementing, documenting, communicating, and reviewing classification scope changes.

3. Define Change Validation Logic

Verify that proposed changes remain governance-compliant, methodologically justified, operationally necessary, fully documented, and independently reproducible.

4. Define Governance Response

Establish procedures for rejected changes, governance conflicts, emergency modifications, reassessment activities, corrective actions, rollback procedures, and continuous improvement.

5. Preserve Change Records

Maintain change requests, impact assessments, governance approvals, validation reports, implementation history, revision logs, timestamps, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — Enterprise Information Governance

Scenario

An organization expands its governance program by introducing a new category of sensitive operational information requiring classification.

Application

Classification Change Management Module governs the evaluation, approval, implementation, documentation, and validation of the updated classification scope before deployment.

Result

Classification changes remain controlled, transparent, governance-compliant, and consistently implemented across the organization.

Use Case 2 — Regulatory Classification Framework

Scenario

A regulatory authority updates national classification rules to include newly emerging digital infrastructure within an existing classification framework.

Application

Classification Change Management Module governs impact assessment, governance approval, implementation planning, validation, and long-term documentation of the classification scope changes.

Result

Classification scope evolves through a controlled, transparent, auditable, and independently verifiable governance process.

Canonical Closing Statement

Classification Change Management Module establishes the canonical governance framework for governing classification scope changes throughout the complete lifecycle. By governing change methodology, impact assessment, governance controls, approval mechanisms, validation procedures, and continuous change management, the module enables controlled evolution, methodological consistency, governance transparency, and trustworthy classification across all operational domains.
