

Classification Inclusion & Exclusion Module (CIEM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Scope Standard (CSS)
Operational Layer: Classification Scope Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Inclusion & Exclusion
Version: 1.0
Status: Canonical · Open Module
Origin Date: 3 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Inclusion & Exclusion

Canonical Definition

Classification Inclusion & Exclusion Module defines the governance framework for determining, documenting, validating, and continuously managing which entities, objects, processes, systems, events, or information shall be included within or excluded from a governed classification scope. It establishes inclusion criteria, exclusion criteria, governance controls, decision rules, validation mechanisms, and continuous management necessary to ensure that classification remains objective, transparent, complete, and methodologically consistent.

Operational Role

Classification Inclusion & Exclusion Module governs the inclusion and exclusion layer of classification governance by ensuring that every classification decision is based upon explicitly defined, governance-approved, and methodologically valid inclusion and exclusion rules.

Minimum Implementation Framework

1. Define Inclusion & Exclusion Requirements

Establish inclusion criteria, exclusion criteria, governance rules, decision thresholds, responsible authorities, and acceptance conditions.

2. Define Inclusion & Exclusion Methodology

Develop standardized procedures for identifying, documenting, reviewing, validating, approving, and maintaining inclusion and exclusion decisions throughout the complete classification lifecycle.

3. Define Inclusion & Exclusion Validation Logic

Verify that inclusion and exclusion decisions remain objective, governance-compliant, methodologically consistent, operationally justified, and independently reproducible.

4. Define Governance Response

Establish procedures for disputed inclusion decisions, incorrect exclusions, governance exceptions, reassessment activities, corrective actions, rule revisions, and continuous improvement.

5. Preserve Inclusion & Exclusion Records

Maintain inclusion decisions, exclusion decisions, governance approvals, validation reports, supporting evidence, revision history, timestamps, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — Enterprise Information Governance

Scenario

An organization determines which categories of information must be included within its corporate classification framework and which information falls outside its governance scope.

Application

Classification Inclusion & Exclusion Module governs the establishment and validation of inclusion and exclusion rules before operational classification begins.

Result

Classification remains complete, transparent, governance-valid, and methodologically consistent across the organization.

Use Case 2 — National Critical Infrastructure Classification

Scenario

A regulatory authority determines which infrastructure operators are subject to national classification requirements and which organizations are excluded.

Application

Classification Inclusion & Exclusion Module governs the objective evaluation of inclusion and exclusion criteria, governance approvals, and supporting evidence before regulatory classifications are assigned.

Result

Classification decisions remain transparent, independently reproducible, governance-compliant, and consistently applied across all regulated entities.

Canonical Closing Statement

Classification Inclusion & Exclusion Module establishes the canonical governance framework for governing inclusion and exclusion within classification. By governing inclusion criteria, exclusion criteria, governance controls, validation mechanisms, decision methodology, and continuous management, the module enables objective classification, methodological consistency, governance transparency, and trustworthy classification across all operational domains.
