

Classification Scope Definition Module (CSDM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Scope Standard (CSS)
Operational Layer: Classification Scope Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Scope Definition
Version: 1.0
Status: Canonical · Open Module
Origin Date: 3 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Scope Definition

Canonical Definition

Classification Scope Definition Module defines the governance framework for establishing, documenting, and maintaining the official scope of classification activities. It establishes scope definition methodology, governance controls, boundary identification procedures, applicability requirements, documentation standards, and validation mechanisms necessary to ensure that every classification initiative begins with clearly defined, objective, authorized, and methodologically valid scope boundaries.

Operational Role

Classification Scope Definition Module governs the scope definition layer of classification governance by ensuring that the operational boundaries of every classification activity are explicitly defined before classification begins.

Minimum Implementation Framework

1. Define Scope Requirements

Establish classification objectives, governed entities, operational boundaries, applicability requirements, responsible authorities, and scope acceptance criteria.

2. Define Scope Methodology

Develop standardized procedures for defining, documenting, reviewing, approving, and maintaining classification scope throughout the complete classification lifecycle.

3. Define Scope Validation Logic

Verify that the defined scope remains complete, objective, governance-compliant, methodologically consistent, operationally appropriate, and independently reproducible.

4. Define Governance Response

Establish procedures for undefined scope, incomplete boundaries, governance exceptions, scope revisions, corrective actions, reassessment activities, and continuous scope improvement.

5. Preserve Scope Records

Maintain scope definitions, governance approvals, validation reports, scope revisions, decision records, supporting documentation, timestamps, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — Enterprise Data Classification

Scenario

An enterprise develops a new classification framework for internal information assets.

Application

Classification Scope Definition Module governs the definition of operational boundaries, applicable information types, excluded assets, governance approvals, and documentation before classification activities begin.

Result

The organization establishes a complete, objective, and governance-approved classification scope that supports consistent implementation.

Use Case 2 — National Critical Infrastructure Classification

Scenario

A government agency establishes the scope for classifying operators of critical infrastructure.

Application

Classification Scope Definition Module governs the identification of included sectors, excluded environments, operational boundaries, governance approvals, and official scope documentation.

Result

The classification program begins with clearly defined, transparent, and methodologically validated scope boundaries suitable for nationwide implementation.

Canonical Closing Statement

Classification Scope Definition Module establishes the canonical governance framework for defining the official scope of classification. By governing scope definition methodology, operational boundaries, governance controls, documentation, validation, and continuous scope management, the module enables objective classification, methodological consistency, governance clarity, and trustworthy classification across all operational domains.
