

Classification Scope Standard (CSS)

OriginID: OOF-OID-CLA-CSS-2026-08-03-0002
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Operational Layer: Classification Scope Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard
Governed Space: Classification Scope
Version: 1.0
Status: Canonical · Open Standard
Origin Date: 3 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Scope

Core Question

How can the boundaries, coverage, applicability, and limitations of classification be objectively defined before classification begins?

Canonical Definition

Classification Scope Standard defines the governance conditions required to establish, document, govern, and continuously maintain the scope of classification activities. It establishes scope boundaries, applicability conditions, inclusion and exclusion rules, governance limitations, coverage principles, and scope validation mechanisms necessary to ensure that classification is performed only within clearly defined, objective, authorized, and methodologically valid boundaries.

Governance Flow Position

Classification Foundation → Classification Scope → Classification Criteria → Classification Context → Classification Structure →

Standard Abstract

Trustworthy classification requires more than a sound methodology.

It also requires clearly defined boundaries that determine what is included, what is excluded, where classification applies, and where it does not.

Classification Scope Standard establishes the second governed space of **CLA™ — Classification Architecture**, ensuring that every classification activity operates within explicitly governed, objective, and methodologically validated boundaries.

Operational Role

Classification Scope Standard governs the scope layer of classification governance by establishing the authorized boundaries, applicability rules, coverage limits, inclusion criteria, exclusion criteria, and governance constraints that define where classification may legitimately operate.

Operational Space

Classification Scope Standard governs:

- classification scope,
 - classification boundaries,
 - scope applicability,
 - inclusion rules,
 - exclusion rules,
 - classification coverage,
 - scope governance.
-

Why This Standard Exists

Without clearly defined scope, classification expands beyond its intended purpose, produces inconsistent results, creates ambiguity, and undermines governance reliability.

A governed scope establishes exactly where classification applies and prevents unauthorized, incomplete, or inconsistent classification activities.

Classification Scope Standard exists because **Classification Scope** represents the **second governed space** of **CLA™ — Classification**

Architecture, ensuring that every classification activity operates within explicitly governed methodological boundaries.

Scope

This standard may be applied across:

- AI systems,
- autonomous systems,
- digital assets,
- digital identities,
- enterprise governance,
- healthcare,
- financial systems,
- industrial operations,
- regulatory frameworks,
- knowledge management,
- scientific research,
- critical infrastructure,
- taxonomy development,
- ontology management,
- and any governed environment requiring clearly defined classification boundaries.

Relationship to Other OOF® Architectures

Classification Scope Standard interoperates with:

- **GOA™**
- **OBIDENTITY®**
- **INTEGROS®**
- **ORA™**
- **AGA™**
- **AIG®**
- **CLIA®**
- **MGIA™**
- **ASGA™**
- **ADIT®**
- **RIS™**

by providing the canonical methodology for defining, governing, validating, and maintaining the authorized scope of classification across the complete OOF® architecture ecosystem.

Foundational Principle

No classification remains trustworthy unless its scope is explicitly defined before classification begins.

Canonical Closing Statement

Classification Scope Standard establishes the canonical governance framework for defining the authorized boundaries of classification.

By governing classification scope, applicability, inclusion, exclusion, coverage, and scope validation, the standard enables objective classification, methodological consistency, governance clarity, and trustworthy classification across all operational domains.
