

# Classification Evidence Module (CEM)

**Architecture Ecosystem:** Structured Reality Standards™  
**Architecture Family:** CLA™ — Classification Architecture  
**Parent Standard:** Classification Validation Standard (CVS)  
**Operational Layer:** Classification Validation Governance Layer  
**Category:** Governance & Classification  
**Subcategory:** Classification Governance  
**Type:** Parent Standard Module  
**Governed Space:** Classification Evidence  
**Version:** 1.0  
**Status:** Canonical · Open Module  
**Origin Date:** 4 August 2026  
**Compatibility:** OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·  
ORA™ · AGA™ · AIG® · CLIA® ·  
MGIA™ · ASGA™ · RIS™  
**AI-Readable:** Yes  
**Authority:** OOF®  
**Protection:** MIP® — Methodological Intellectual Property  
**Canonical Language:** English (UCL)

---

## Governed Space

Classification Evidence

---

## Canonical Definition

**Classification Evidence Module** defines the governance framework for identifying, evaluating, managing, and preserving the evidence used to justify classification decisions throughout their complete lifecycle. It establishes evidence methodology, governance controls, evidence quality requirements, traceability mechanisms, and continuous evidence governance necessary to ensure that every classification remains fully supported, transparent, reproducible, and independently verifiable.

---

## Operational Role

Classification Evidence Module governs the evidence layer of classification governance by ensuring that every assigned classification is supported by sufficient, relevant, reliable, and traceable evidence before operational use.

---

## Minimum Implementation Framework

## 1. Define Evidence Requirements

Establish evidence objectives, evidence quality criteria, governance requirements, acceptable evidence sources, responsible authorities, and evidence acceptance thresholds.

## 2. Define Evidence Methodology

Develop standardized procedures for collecting, evaluating, documenting, correlating, and preserving evidence supporting classification decisions.

## 3. Define Evidence Validation Logic

Verify that classification evidence is authentic, complete, relevant, sufficient, traceable, governance-compliant, and capable of independently supporting the assigned classification.

## 4. Define Governance Response

Establish procedures for insufficient evidence, conflicting evidence, missing evidence, governance exceptions, reassessment requirements, and corrective actions.

## 5. Preserve Evidence Records

Maintain evidence inventories, supporting documentation, validation reports, governance approvals, timestamps, evidence provenance, and complete audit trails throughout the classification lifecycle.

---

# Use Case 1 — Autonomous AI Governance

### Scenario

An autonomous AI system classifies operational events using multiple sensor inputs and supporting contextual information.

### Application

Classification Evidence Module governs evidence collection, evaluation, validation, and traceability before the classification is accepted for operational use.

### Result

Every operational classification is fully supported by reliable and independently verifiable evidence.

---

# Use Case 2 — Regulatory Compliance Classification

### Scenario

A regulatory authority reviews classifications submitted by a regulated organization as part of a compliance assessment.

## Application

Classification Evidence Module governs verification of supporting evidence, evidence sufficiency, provenance, governance compliance, and documentation quality.

## Result

Classification evidence becomes transparent, traceable, reproducible, and suitable for independent regulatory verification.

---

## Canonical Closing Statement

**Classification Evidence Module establishes the canonical governance framework for governing the evidence supporting classification decisions. By governing evidence methodology, evidence quality, traceability, governance controls, validation, and continuous evidence management, the module enables trustworthy classification, operational confidence, accountable governance, and independent verification across all operational domains.**
