

Digital Original Module (DOM™)

OOF™ Origin Open Foundation™

Independent Methodological Authority

Category: AI and Interpretation

Subcategory: Representation and Copy

Module: Digital Original Module (DOM™)

Type: Core Classification Module

Standard: Representation & Copy Standard (RCS™)

Status: Canonical Module

Version: 1.0

Effective Date: 19 March 2026

Canonical Definition

A Digital Original is an asset that originates in digital form and does not derive from any prior physical or digital source.

A digital original defines its own point of origin and serves as the primary reference for all its copies and representations.

Why This Matters

Without a clear definition of digital originals:

- digital works may be mistaken for copies
- origin becomes ambiguous
- ownership becomes unclear
- value cannot be properly anchored

Digital creation requires the same structural clarity as physical origin.

Minimum Implementation Framework (MIF)

Step 1 — Confirm Digital Origin

Ensure the asset is created directly in digital form.

Step 2 — Verify Non-Derivation

Confirm that the asset is not derived from any prior asset.

Step 3 — Assign Original Status

Define the asset as the original source of its structure.

Step 4 — Establish Reference Point

All future copies or representations must reference this digital original.

Step 5 — Preserve Origin Integrity

The digital original must remain distinguishable from all derived forms.

Use Case 1 — Digital Artwork Creation

Scenario

An artist creates an artwork directly in digital form.

Application

The file is defined as a digital original under DOM™.

Result

- clear origin is established
 - copies can be distinguished
 - ownership and value are preserved
-

Use Case 2 — AI-Generated Digital Asset

Scenario

A digital asset is generated using AI systems without prior source material.

Application

The output is defined as a digital original.

Result

- origin is clearly defined
 - distinction from copies is maintained
 - structured classification of AI-generated works
-

Structural Principle

A digital original defines its own origin.
All copies derive from it.

Closing Statement

Digital creation is not secondary.
It is a new point of origin.
