

DeMonet™ Standard

OOF™ Origin Open Foundation™

Global Methodology Authority

OriginID: OOF-OID-ECO-DMN-2026-01-26-0003

Category: Economic & Value Standards (ECO)

Subcategory: DeMonet™ (DMN)

Version: 1.0

Status: Canonical · Binding

Effective Date: 26 January 2026

Compatibility:

Methodology OS™: Compatible

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL™)

B. Standard Abstract

This standard defines DeMonet™ as the governed process through which economic value is formally withdrawn from an asset.

It establishes the conditions and protocol under which an asset transitions into ZVA™ state.

DeMonet™ ensures that value removal is traceable, justified, and non-arbitrary.

C. Canonical Definition

DeMonet™ is defined as the canonical transition process by which an asset's admissible economic value is formally removed within a governed system.

DeMonet™ results in ZVA™ classification.

D. Base

This standard is based on:

- Deterministic Asset State Architecture
- Non-Arbitrary Value Withdrawal
- Traceable Governance
- State-Based Economic Logic

Value removal must be justified, recorded, and auditable.

E. Purpose & Scope

Purpose

To define a structured mechanism for value nullification in response to authenticity failure, legal violation, ecological harm, systemic risk, or ethical breach.

Scope

Applies to:

- Value Asset states
- Origin Asset states
- Digital and AI-derived assets
- Economic instruments
- Certified systems

Does not apply to market price fluctuation or voluntary depreciation.

F. Applicability

DeMonet™ applies when:

- authenticity fails
 - ecological violation is confirmed
 - legal non-compliance is established
 - systemic risk is detected
 - ethical breach is validated
-

G. Protocol

DeMonet™ transition requires:

1. Trigger condition identification
2. Verification of violation or failure
3. Governance confirmation
4. Formal withdrawal of admissible value
5. Asset reclassification to ZVA™
6. Record preservation

All steps must be traceable.

H. Classification & States

State transition:

Value Asset → DeMonet™ → ZVA™

Origin Asset → DeMonet™ → ZVA™

Direct reassignment without protocol is invalid.

I. Licensing & Usage

Reference use permitted.

Implementation of DeMonet™ mechanisms requires OOF™ license.

Derivative transition systems require explicit authorization under MIP™.

J. Compatibility & Dependencies

Compatible with:

- Methodology OS™
 - ZVA™ Standard
 - ReMonet™ Standard
 - Value Asset Standard
 - MTVF™
 - CAP™
-

K. Non-Compliance Consequences

Assets processed without governed DeMonet™ protocol may not be classified as ZVA™ within canonical systems.

Unauthorized value removal is invalid.

Canonical Closing Statement

DeMonet™ is not destruction.

It is governed value withdrawal within a deterministic lifecycle.
