Category: AI and Interpretation

Subcategory: Representation and Copy

Module: Edition Module (EDM)

Type: Monetization and Scarcity Module

Standard: Representation & Copy Standard (RCS™)

Status: Canonical Module

Version: 1.0

Effective Date: 19 March 2026

Canonical Definition

An Edition is a controlled set of authorized copies derived from a single original asset, limited in number and defined by clear ownership and distribution rules.

Each edition unit is a distinct asset linked to the same origin but limited by declared quantity.

Why This Matters

Without controlled editions:

- copies may become unlimited
- value may collapse
- ownership becomes diluted
- monetization loses structure

Editions introduce controlled scarcity into reproducible assets.

Minimum Implementation Framework (MIF)

Step 1 — Identify Original Asset

Define the original asset from which the edition is derived.

Step 2 — Define Edition Size

Set a fixed and declared number of units.

The total number must not change after declaration.

Step 3 — Assign Unit Identity

Each unit must be individually identifiable within the edition.

Step 4 — Define Ownership Rights

Each unit must have clearly defined ownership and usage rights.

Step 5 — Declare Edition Status

The asset must be identified as part of a limited edition.

Use Case 1 — High-Value Gallery Monetization

Scenario

A gallery holds a high-value artwork and chooses not to sell the original.

Application

A limited edition of 9 authorized physical copies is created and distributed.

Result

- monetization without loss of the original
 - controlled scarcity preserves value
 - each unit holds independent ownership value
-

Use Case 2 — Artist Global Exposure

Scenario

An artist digitizes their work and creates a limited edition for global distribution.

Application

Digital or physical editions are issued with defined quantity and ownership.

Result

- global accessibility
 - new revenue stream
 - expanded audience without loss of control
-

Structural Principle

Scarcity defines value.
Control preserves it.

Closing Statement

An original does not need to be sold to create value.
It needs to be structured.
