

EIM — Execution Integrity Module

Standard: Execution Layer — Enforcement Standard

Category: Governance & Enforcement

Subcategory: Execution & Enforcement Systems

Type: Integrity & Validation Module

Version: 1.0

Status: Canonical · Open

Effective Date: 15 April 2026

Canonical Definition

Execution Integrity defines the conditions under which actions remain consistent, unaltered, and free from manipulation during execution.

An action is valid only if it remains consistent with its defined process and is not altered, manipulated, or deviated during execution.

If execution is modified or deviates from defined conditions, it is invalid.

Purpose

EIM ensures that execution:

- remains consistent
- follows defined process
- is not altered during runtime

It protects execution from manipulation.

Core Principle

If execution is altered, it is not valid.

MIF — Minimum Implementation Framework

A system implementing EIM must:

- define expected execution behavior
 - monitor execution in real time
 - detect deviations from defined process
 - detect unauthorized modifications
 - ensure execution consistency
-

Core Conditions

- execution must follow defined process
 - no unauthorized modification is allowed
 - deviations must be detectable
-

- execution must remain consistent
-

Failure Condition

Execution integrity is invalid if:

- process is altered during execution
 - unauthorized changes occur
 - deviations are not detected
 - system allows manipulated execution
-

Use Case 1 — Process Manipulation

Scenario

A system or user alters execution steps during operation.

Without EIM

- manipulation occurs
- output appears valid

With EIM

- deviation is detected
- execution is invalidated

Result

System prevents manipulated outcomes.

Use Case 2 — AI Output Manipulation

Scenario

An AI system produces output that is altered during processing.

Without EIM

- altered output is accepted
- integrity is compromised

With EIM

- modification is detected
- output is flagged or blocked

Result

Execution remains consistent and trustworthy.

Closing Statement

Execution must remain consistent or it is not valid.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.

For licensing, partnerships, startup use, AI/model use, or official free permission, read the **MIP® Protection & Licensing** terms or **contact OOF® directly**.
