

EAIM — Evidence Accountability Integrity Module

OriginID: OOF-OID-AGA-EAIM-2026-06-17-0050Architecture **Ecosystem:** Structured Reality Standards™

Architecture Family: Accountability Governance Architecture (AGA™)

Operational Layer: Evidence Governance Layer

Governed Space: Evidence Accountability Integrity

Category: Governance & Enforcement

Subcategory: Evidence Governance

Type: Evidence Accountability Standard Module

Parent Standard: Evidence Accountability Standard (EAS)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 17 June 2026

Compatibility: OOF Methodology OS · Evidence Accountability Standard (EAS) · Governance Oversight Standard (GOS) · Accountability Governance Standard (AGS-A) · Consequence Governance Standard (CGS) · INTEGROS® — Integrity Standard

AI-Readable: Yes

Authority: OOF

Protection: MIP — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition

Evidence Accountability Integrity Module (EAIM) defines the structural conditions under which evidence creation, evidence collection, evidence handling, evidence validation, evidence review, evidence interpretation, evidence preservation, evidentiary decisions, and evidentiary outcomes remain attributable, accountable, traceable, governable, reconstructable, enforceable, and operationally valid throughout the evidence lifecycle.

EAIM governs evidence accountability.

The module establishes the integrity conditions required to determine who created evidence, who collected evidence, who reviewed evidence, who validated evidence, who interpreted evidence, who ignored evidence, and who remains accountable for evidentiary failures.

Module Operational Role

EAIM defines the evidence-accountability governance layer of EAS.

Its role is to ensure that evidence remains connected to accountable governance actors throughout its lifecycle.

Module Operational Space

EAIM governs:

- evidence accountability
- evidence ownership
- evidence-review accountability
- evidence-validation accountability
- evidence-handling accountability
- evidentiary-failure accountability
- evidence-governance accountability
- consequence attribution

The module applies wherever governance must determine accountability arising from evidence.

Module Function

The module applies wherever systems must preserve:

- accountable evidence structures
- attributable evidence decisions
- reconstructable accountability history
- traceable evidentiary outcomes
- governance-valid accountability relationships
- operational evidence enforcement

Its function is to ensure that governance can determine who remains accountable for evidence and evidentiary outcomes.

Minimum Implementation Framework

1. Define the Evidence Accountability Object

The organization must define which evidence environments require accountability governance.

This may include:

- investigations
- audits
- compliance systems
- certification environments
- legal proceedings
- operational records
- AI-generated evidence systems
- Human-AI governance environments

2. Define Evidence Accountability Conditions

The system must define the conditions under which evidence accountability remains valid.

This includes:

- attribution requirements
- accountability requirements
- enforcement requirements
- consequence requirements
- governance requirements
- accountability-valid evidence conditions

3. Define Accountability Degradation Detection Logic

The system must define how evidence-accountability failures are identified.

This may include:

- anonymous evidence creation
- undocumented evidence reviews
- accountability gaps
- evidence manipulation
- governance-blind evidence handling
- unverifiable evidence ownership

4. Define Operational Response or Governance Logic

The system must define governance logic for evidence-accountability failures.

Governance response may include:

- accountability review
- attribution verification
- governance intervention
- corrective actions
- evidence reassessment
- enforcement procedures
- operational invalidation where required

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- evidence creation
- evidence collection
- evidence reviews
- evidentiary decisions

- governance reviews
- resulting accountability outcomes

An evidence-governance environment must not remain accountability-valid if materially significant evidence activities cannot be attributed, reconstructed, reviewed, enforced, validated, or governed.

Use Case 1 — Investigation Environment

Scenario

A governance investigation relies on documents, emails, photographs, witness statements, operational records, and audit findings to support conclusions.

Application

EAIM reconstructs who created evidence, who reviewed it, who approved it, who challenged it, and who remains accountable for evidentiary outcomes.

Result

Governance gains visibility into accountability across the entire evidence lifecycle.

Use Case 2 — AI Evidence Environment

Scenario

An AI governance system generates reports, analytical outputs, operational records, recommendations, and evidentiary artifacts used in decision-making.

Application

EAIM reconstructs evidence ownership, validation activities, review decisions, accountability relationships, and governance responsibilities.

Result

Governance gains visibility into accountability for evidence across intelligent operational ecosystems.

Canonical Closing Statement

Evidence Accountability Integrity Module (EAIM) defines the structural conditions under which evidence creation, evidence collection, evidence handling, evidence validation, evidence review, evidence interpretation, evidence preservation, evidentiary

decisions, and evidentiary outcomes remain attributable, accountable, traceable, governable, reconstructable, enforceable, and operationally valid throughout the evidence lifecycle.

Evidence without accountability creates unverifiable governance. Evidence accountability integrity therefore becomes a foundational condition of trustworthy evidence governance, trustworthy investigations, and trustworthy governance conclusions.
