

Economic State Architecture Standard

OOF™ Origin Open Foundation™

Global Methodology Authority

OriginID: OOF-OID-ECO-ESA-2026-01-26-0005

Category: Economic & Value Standards (ECO)

Subcategory: Economic State Architecture (ESA)

Version: 1.0

Status: Canonical · Binding

Effective Date: 26 January 2026

Compatibility:

Methodology OS™: Compatible

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL™)

B. Standard Abstract

This standard defines the canonical economic state architecture governing asset value within the OOF™ system.

It establishes a deterministic and non-skippable lifecycle connecting Origin Asset™, DeMonet™, ZVA™, ReMonet™, and Value Asset states.

The architecture prevents arbitrary value assignment, historical rewriting, and systemic manipulation.

C. Canonical Definition

The **Economic State Architecture (ESA)** is defined as the governed structural model that determines all admissible economic state transitions within the OOF™ system.

No asset may hold, lose, or regain value outside the defined lifecycle.

D. Base

This standard is based on:

- Deterministic State Logic
- Non-Reversible Transition Architecture
- Traceable Historical Continuity
- Governed Value Recognition
- Canonical State Separation

Value is treated as a governed state condition, not a numerical fluctuation.

E. Purpose & Scope

Purpose

To define a closed, structured economic lifecycle that governs value assignment, withdrawal, and restoration.

Scope

Applies to:

- Physical assets
- Digital assets
- AI-derived outputs
- Economic instruments
- Certified systems

This standard governs structural logic only.

It does not define valuation models, pricing methods, or market volatility.

F. Applicability

This architecture applies to all assets governed under Economic & Value Standards.

All economic state transitions must conform to this structure.

G. Protocol

Canonical Asset Lifecycle

1. Origin Asset™
2. DeMonet™
3. ZVA™
4. ReMonet™
5. Value Asset

Structural Rules

- No state may be skipped.
- No direct transition from ZVA™ to Value Asset is permitted without ReMonet™.
- No value removal may occur without DeMonet™.
- No historical reset is permitted.

The lifecycle is deterministic and sequential.

H. Classification & States

The following actions are invalid within canonical systems:

- Direct value injection
- Retroactive value rewriting
- Historical erasure of ZVA™ state
- Parallel state coexistence

Any economic model conflicting with ESA is non-compatible with OOF™ canonical systems.

I. Licensing & Usage

Reference use permitted.

Implementation of ESA-based economic governance systems requires OOF™ license.

Derivative lifecycle architectures replicating this deterministic model require authorization under MIP™.

J. Compatibility & Dependencies

This standard integrates and governs:

- ZVA™ Standard
- DeMonet™ Standard
- ReMonet™ Standard
- Value Asset Standard

ESA defines the structural boundary within which these standards operate.

K. Non-Compliance Consequences

Assets processed outside the ESA lifecycle are non-admissible within canonical systems.

Value states assigned outside the defined sequence are invalid.

Canonical Closing Statement

Economic value is not assumed.

It is admitted, withdrawn, and restored within a governed state architecture.
