

Behavioral Evidence Availability Module - (BEAvM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-AIG-BVES-BEAM-2026-06-26-0005

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: AI Governance Architecture (AIG®)

Operational Layer: AI Behavioral Governance Layer

Governed Space: Behavioral Evidence Availability

Category: Governance & Enforcement

Subcategory: AI Behavioral Evidence Governance

Type: Behavioral Evidence Standard Module

Parent Standard: Behavioral Evidence Standard (BVES)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 June 2026

Compatibility: OOF Methodology OS · AI Governance Architecture (AIG®) · Governance Architecture (GOA™) · Operational Reality Architecture (ORA™) · Cognitive Governance Intelligence Architecture (CLIA®) · Memory Governance Intelligence Architecture (MGIA™) · Accountability Governance Architecture (AGA™) · Autonomous Systems Governance Architecture (ASGA™)

AI-Readable: Yes

Authority: OOF

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition System

Canonical Definition

Behavioral Evidence Availability Module (BEAvM) defines the structural conditions under which AI behavioral evidence remains accessible, retrievable, usable, governance-ready, and available to authorized governance participants throughout the complete behavioral lifecycle.

BEAM governs behavioral evidence availability.

The module establishes the governance conditions required to ensure that trustworthy evidence is available whenever legitimate governance, regulatory, compliance, accountability, operational, or investigative activities require it.

Evidence may be preserved.

Evidence must also remain available.

BEAM governs that availability.

Module Operational Role

BEAM defines the behavioral-evidence-availability layer of BVES.

Its role is to ensure continuous availability of governance-valid behavioral evidence.

Module Operational Space

BEAM governs:

- behavioral evidence availability
- evidence accessibility
- governance evidence access
- evidence retrieval
- evidence readiness
- authorized evidence access
- governance information availability
- evidence availability governance

The module applies wherever AI behavioral evidence must remain available to authorized governance participants.

Module Function

The module applies wherever systems must preserve:

- accessible behavioral evidence,
- retrievable governance records,
- governance-ready evidence,
- authorized evidence availability,
- operational evidence access,
- trustworthy governance information.

Its function is to ensure that preserved evidence can be accessed when governance decisions, audits, investigations, or regulatory reviews require it.

Minimum Implementation Framework

1. Define the Behavioral Evidence Availability Object

The organization must define which behavioral evidence must remain continuously available.

2. Define Availability Conditions

The system must define conditions for:

- authorized access,
- retrieval capability,
- governance readiness,
- operational availability,
- evidence accessibility,
- availability validation.

3. Define Availability Failure Detection Logic

The system must identify:

- unavailable evidence,
- inaccessible records,
- retrieval failures,
- delayed evidence access,
- governance access failures,
- governance-invalid evidence availability.

4. Define Operational Response or Governance Logic

Governance response may include:

- availability review,
- evidence recovery,
- access validation,
- governance intervention,
- compliance review,
- operational restoration.

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- evidence access,
- retrieval activities,
- governance reviews,
- authorization records,
- availability validations,
- resulting governance outcomes.

An AI behavioral environment must not remain evidence-valid if materially significant behavioral evidence cannot be accessed, retrieved, reviewed, validated, preserved, or governed by authorized governance participants.

Use Case 1 — Financial Regulatory Audit

Scenario

A financial regulator requests immediate access to behavioral evidence supporting AI-driven investment decisions.

Application

BEAM ensures that authorized auditors can retrieve complete governance evidence without delay.

Result

The organization strengthens regulatory compliance, improves governance transparency, and increases confidence in AI-supported financial operations.

Use Case 2 — National Critical Infrastructure

Scenario

Following an operational incident, investigators require immediate access to AI behavioral evidence generated across multiple autonomous systems.

Application

BEAM ensures that authorized investigators can retrieve governance-valid evidence quickly and consistently.

Result

The organization accelerates investigations, strengthens operational resilience, supports accountability, and improves trust in AI governance.

Canonical Closing Statement

Evidence has governance value only when it can be used. Availability ensures that trustworthy evidence remains within reach whenever organizations need to understand the past, govern the present, or make responsible decisions about the future.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.

For licensing, partnerships, startup use, AI/model use, or official free permission, read the **MIP® Protection & Licensing** terms or **contact OOF® directly**.

Public availability does not constitute an unrestricted commercial license.

Active Protection & Compatibility Detection applies.
