

Behavioral Safety Preservation Module - (BSPM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-AIG-BSS-BSPM-2026-06-26-0001

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: AI Governance Architecture (AIG®)

Operational Layer: AI Behavioral Governance Layer

Governed Space: Behavioral Safety Preservation

Category: Governance & Enforcement

Subcategory: AI Behavioral Safety Governance

Type: Behavioral Safety Standard Module

Parent Standard: Behavioral Safety Standard (BSS)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 June 2026

Compatibility: OOF Methodology OS · AI Governance Architecture (AIG®) · Governance Architecture (GOA™) · Operational Reality Architecture (ORA™) · Cognitive Governance Intelligence Architecture (CLIA®) · Memory Governance Intelligence Architecture (MGIA™) · Accountability Governance Architecture (AGA™)

AI-Readable: Yes

Authority: OOF

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition System

Canonical Definition

Behavioral Safety Preservation Module (BSPM) defines the structural conditions under which AI behavioral safety is continuously preserved throughout operational execution, behavioral evolution, environmental change, and autonomous decision-making while maintaining governance integrity, accountability, and operational trust.

BSPM governs behavioral safety preservation.

The module establishes the governance conditions required to ensure that safe AI behavior remains continuously protected rather than temporarily achieved.

Safety is not established once.

Safety must be preserved continuously.

BSPM governs that preservation.

Module Operational Role

BSPM defines the behavioral-safety-preservation layer of BSS.

Its role is to preserve safe AI behavior throughout the complete behavioral lifecycle.

Module Operational Space

BSPM governs:

- behavioral safety preservation
- continuous behavioral safety
- governance safety preservation
- operational safety continuity
- behavioral protection
- safety maintenance
- trustworthy operation
- safety governance

The module applies wherever organizations require AI behavior to remain continuously safe despite changing operational conditions.

Module Function

The module applies wherever systems must preserve:

- safe behavior,
- governance integrity,
- operational reliability,
- behavioral predictability,
- accountable operation,
- long-term safety.

Its function is to ensure that behavioral safety remains an ongoing governance responsibility rather than a one-time validation.

Minimum Implementation Framework

1. Define the Behavioral Safety Preservation Object

The organization must define which AI behaviors require continuous safety preservation.

2. Define Preservation Conditions

The system must define governance conditions including:

- behavioral predictability,
 - governance compliance,
 - operational reliability,
-

- accountability,
- behavioral stability,
- continuous safety.

3. Define Preservation Failure Detection Logic

The system must identify:

- declining behavioral safety,
- unsafe behavioral patterns,
- governance failures,
- operational instability,
- emerging safety risks,
- governance-invalid safety conditions.

4. Define Operational Response or Governance Logic

Governance response may include:

- safety review,
- governance assessment,
- preventive intervention,
- operational restriction,
- escalation,
- corrective actions.

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- safety assessments,
- governance reviews,
- behavioral observations,
- preventive actions,
- supporting evidence,
- resulting governance outcomes.

An AI behavioral environment must not be considered behaviorally safe unless behavioral safety can be continuously preserved, reviewed, validated, monitored, and governed.

Use Case 1 — Autonomous Surgical Assistant

Scenario

An AI-assisted robotic surgery platform continuously supports complex medical procedures.

Application

BSPM preserves behavioral safety throughout continuous operation despite changing patient conditions and clinical environments.

Result

The healthcare organization strengthens patient protection, clinical confidence, and long-term governance assurance.

Use Case 2 — Autonomous Railway Network

Scenario

AI systems continuously coordinate autonomous train operations across a national transportation network.

Application

BSPM governs continuous behavioral safety preservation despite operational complexity, environmental variation, and network-wide coordination.

Result

The railway operator maintains safe autonomous operations, strengthens public trust, and preserves governance integrity across critical infrastructure.

Canonical Closing Statement

Safety endures only when it is continuously protected. Behavioral Safety Preservation ensures that trustworthy AI remains worthy of trust every moment it operates, not only at the moment it is approved.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.

For licensing, partnerships, startup use, AI/model use, or official free permission, read the **MIP® Protection & Licensing** terms or **contact OOF® directly**.

Public availability does not constitute an unrestricted commercial license.

Active Protection & Compatibility Detection applies.
