

GDisM — Governance Disclosure Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-GOA-GTS-GDISM-2026-06-25-0004

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: Governance Architecture (GOA™)

Governance Flow Position: Authority → Boundary →

Scope → Delegation → Accountability → Validation → Integrity → Transparency →

Continuity → Interoperability

Operational Layer: Governance Transparency Layer

Governed Space: Governance Disclosure

Category: Governance & Enforcement

Subcategory: Governance Transparency Governance

Type: Governance Transparency Standard Module

Parent Standard: Governance Transparency Standard (GTS)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 25 June 2026

Compatibility: OOF Methodology OS · Governance Transparency Standard (GTS)

· Governance Integrity Standard (GIS) · Governance Validation Standard (GVS)

· Governance Accountability Standard (GAS-A) · INTEGROS® — Integrity Standard

AI-Readable: Yes

Authority: OOF

Protection: MIP — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition System

Canonical Definition

Governance Disclosure Module (GDisM) defines the structural conditions under which governance information, governance decisions, governance activities, governance controls, governance relationships, and governance outcomes remain appropriately disclosed, accessible, reviewable, traceable, governable, and operationally valid throughout the governance lifecycle.

GDisM governs governance disclosure.

The module establishes the foundational conditions required to determine what governance information should be disclosed, to whom it should be disclosed, when it should be disclosed, and under which governance conditions disclosure remains legitimate throughout operational reality.

Governance may be documented.

Governance information must also be appropriately disclosed.

GDisM governs that disclosure.

Module Operational Role

GDisM defines the governance-disclosure layer of GTS.

Its role is to establish governance-valid disclosure practices throughout governance environments.

Module Operational Space

GDisM governs:

- governance disclosure
- governance-information release
- governance communication
- governance-information accessibility
- governance stakeholder disclosure
- governance reporting
- governance traceability
- governance disclosure governance

The module applies wherever governance information must be communicated to legitimate governance participants.

Module Function

The module applies wherever systems must preserve:

- appropriate governance disclosure
- traceable governance communications
- reconstructable disclosure history
- governance-valid reporting
- attributable disclosure activities
- operational governance transparency

Its function is to ensure that governance information reaches the appropriate stakeholders while protecting confidentiality where required.

Minimum Implementation Framework

1. Define the Governance Disclosure Object

The organization must define which governance environments require governance disclosure.

This may include:

- organizations
-

- institutions
- governments
- regulatory environments
- governance committees
- corporate governance structures
- AI governance systems
- autonomous-agent ecosystems
- Human-AI governance environments

2. Define Governance Disclosure Conditions

The system must define the conditions under which governance disclosure remains valid.

This includes:

- disclosure requirements
- authorization requirements
- confidentiality requirements
- traceability requirements
- reporting requirements
- governance-valid disclosure conditions

3. Define Disclosure Degradation Detection Logic

The system must define how governance-disclosure failures are identified.

This may include:

- undisclosed governance decisions
- delayed disclosures
- unauthorized disclosures
- incomplete governance reporting
- inaccessible governance information
- governance-invalid disclosure activities

4. Define Operational Response or Governance Logic

The system must define governance logic for governance-disclosure failures.

Governance response may include:

- disclosure review
- governance intervention
- corrective reporting
- stakeholder notification
- disclosure validation
- governance reassessment
- operational invalidation where required

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- governance disclosures
- disclosure decisions
- governance reviews
- reporting procedures
- validation activities
- resulting governance states

A governance environment must not remain transparency-valid if materially significant governance disclosures cannot be reconstructed, reviewed, validated, preserved, or governed.

Use Case 1 — Public Sector Governance

Scenario

A government institution must disclose governance decisions, financial reports, and accountability information to citizens, regulators, and oversight bodies.

Application

GDisM governs governance disclosure, reporting obligations, stakeholder communication, and disclosure traceability.

Result

The institution gains stronger public trust, improved accountability, reduced information asymmetry, and greater governance transparency.

Use Case 2 — Human-AI Governance Environment

Scenario

An AI-supported governance platform generates governance recommendations that must be disclosed to authorized human decision-makers before implementation.

Application

GDisM governs governance disclosure, Human-AI communication, authorized information sharing, and governance reporting.

Result

The organization gains stronger governance transparency, improved Human-AI collaboration, reduced communication risk, and greater stakeholder confidence.

Canonical Closing Statement

Governance Disclosure Module (GDisM) defines the structural conditions under which governance information, governance decisions, governance activities, governance controls, governance relationships, and governance outcomes remain appropriately disclosed, accessible,

reviewable, traceable, governable, and operationally valid throughout the governance lifecycle.

Governance information that is not appropriately disclosed cannot achieve effective transparency. Governance Disclosure therefore becomes a foundational condition of trustworthy governance transparency governance.
