

GEVM — Governance Evidence Validation Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-GOA-GVS-GEVM-2026-06-22-0001

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: Governance Architecture (GOA™)

Governance Flow Position: Authority → Boundary → Scope →

Delegation → Accountability → Validation → Integrity → Transparency →

Continuity → Interoperability

Operational Layer: Governance Validation Layer

Governed Space: Governance Evidence Validation

Category: Governance & Enforcement

Subcategory: Governance Validation Governance

Type: Governance Validation Standard Module

Parent Standard: Governance Validation Standard (GVS)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 22 June 2026

Compatibility: OOF Methodology OS · Governance Validation Standard (GVS)

· Governance Accountability Standard (GAS-A)

· Audit in Real Time (ART™) · ArtData™ · INTEGROS® — Integrity Standard

AI-Readable: Yes

Authority: OOF

Protection: MIP — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition System

Canonical Definition

Governance Evidence Validation Module (GEVM) defines the structural conditions under which governance evidence remains verifiable, attributable, traceable, reviewable, auditable, governable, enforceable, and operationally valid throughout the governance lifecycle.

GEVM governs governance evidence validation.

The module establishes the foundational conditions required to determine whether governance evidence remains sufficient, reliable, relevant, reconstructable, and suitable for governance-validation activities throughout operational reality.

Governance decisions may exist.

Governance outcomes may exist.

Governance evidence must also exist.

GEVM governs that evidence.

Module Operational Role

GEVM defines the governance-evidence-validation layer of GVS.

Its role is to establish governance-valid evidence foundations throughout governance environments.

Module Operational Space

GEVM governs:

- governance evidence validation
- governance-evidence legitimacy
- governance-evidence attribution
- governance-evidence traceability
- governance-evidence auditability
- governance-evidence reviewability
- governance-evidence reconstruction
- governance-evidence reliability

The module applies wherever governance outcomes require supporting evidence.

Module Function

The module applies wherever systems must preserve:

- verifiable governance evidence
- attributable governance records
- traceable governance information
- reconstructable governance history
- governance-valid evidence repositories
- operational governance confidence

Its function is to ensure that governance validation remains supported by evidence capable of independent review and verification.

Minimum Implementation Framework

1. Define the Governance Evidence Object

The organization must define which governance environments require governance-evidence validation.

This may include:

- organizations
- institutions
- governments
- regulatory environments
- governance committees
- corporate governance structures
- AI governance systems
- Human-AI governance environments

2. Define Governance Evidence Conditions

The system must define the conditions under which governance evidence remains valid.

This includes:

- evidence requirements
- attribution requirements
- traceability requirements
- verification requirements
- auditability requirements
- governance-valid evidence conditions

3. Define Evidence Degradation Detection Logic

The system must define how governance-evidence failures are identified.

This may include:

- missing evidence
- unverifiable evidence
- incomplete evidence
- manipulated evidence
- unattributable evidence
- governance-invalid evidence activities

4. Define Operational Response or Governance Logic

The system must define governance logic for governance-evidence failures.

Governance response may include:

- evidence review
- evidence verification
- governance intervention
- corrective actions
- evidence reconstruction
- evidence validation
- operational invalidation where required

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- governance evidence
- evidence reviews
- governance reviews
- intervention procedures
- validation activities
- resulting governance states

A governance environment must not remain evidence-valid if materially significant governance evidence cannot be reconstructed, reviewed, attributed, verified, preserved, or governed.

Use Case 1 — Corporate Governance Audit

Scenario

An organization undergoes a governance audit requiring evidence supporting governance decisions, governance controls, and governance outcomes.

Application

GEVM validates governance evidence, governance records, and governance-documentation integrity.

Result

The organization gains stronger governance credibility, reduced governance ambiguity, and improved audit readiness.

Use Case 2 — Human-AI Governance Environment

Scenario

Human and AI governance actors jointly produce governance outcomes requiring evidence-based validation.

Application

GEVM validates governance evidence, decision-support evidence, and Human-AI governance records.

Result

The organization gains stronger governance trust, reduced validation uncertainty, and improved

Canonical Closing Statement

Governance Evidence Validation Module (GEVM) defines the structural conditions under which governance evidence remains verifiable, attributable, traceable, reviewable, auditable, governable, enforceable, and operationally valid throughout the governance lifecycle.

Governance validation without governance evidence cannot remain trustworthy. Governance Evidence Validation therefore becomes a foundational condition of trustworthy governance validation governance.
