

GOA™ Complete Standards & Modules Index

Governance Architecture

Official Governance Architecture Map for Organizations, Governments, Institutions, AI Systems, Autonomous Systems, Human-AI Environments, and Multi-Organization Governance Ecosystems

This document serves as the official OOF® governance architecture map and structural index used for governance design, governance navigation, governance classification, governance diagnostics, governance architecture development, and governance interoperability across organizational, institutional, governmental, AI, autonomous, and future governance environments.

GOA™ consists of 10 Parent Standards and 50 Core Modules.

Additional standards and modules may be added when new governable governance spaces are identified. However, the standards and modules listed below form the core structural backbone of GOA™.

1. Governance Authority Standard (GAS)

Governed Space: Governance Authority

Core Question: Who has the legitimate authority to govern?

Modules:

- **GAM** — Governance Authority Module
 - **GAAM** — Governance Authority Assignment Module
 - **GAVM** — Governance Authority Verification Module
 - **GADM** — Governance Authority Delegation Module
 - **GACM** — Governance Authority Continuity Module
-

2. Governance Boundary Standard (GBS)

Governed Space: Governance Boundaries

Core Question: Where are the governance boundaries?

Modules:

- **BDM** — Boundary Definition Module
 - **BBM** — Boundary Breach Module
 - **BCM** — Boundary Change Module
 - **BIM** — Boundary Integrity Module
 - **BAM** — Boundary Alignment Module
-

3. Governance Scope Standard (GSS)

Governed Space: Governance Scope

Core Question: What falls within governance?

Modules:

- **GSM** — Governance Scope Mapping Module
 - **GEM** — Governance Exception Module
 - **GCM** — Governance Coverage Module
 - **GSAM** — Governance Scope Alignment Module
 - **GBSM** — Governance Boundary Synchronization Module
-

4. Governance Delegation Standard (GDS)

Governed Space: Governance Delegation

Core Question: How may governance authority be delegated?

Modules:

- **GDAM** — Governance Delegation Authorization Module
 - **GDTM** — Governance Delegation Traceability Module
 - **GDRM** — Governance Delegation Responsibility Module
 - **GDCM** — Governance Delegation Continuity Module
 - **GDVM** — Governance Delegation Verification Module
-

5. Governance Accountability Standard (GAS-A)

Governed Space: Governance Accountability

Core Question: Who remains accountable for governance outcomes?

Modules:

- **GARM** — Governance Accountability Registration Module
 - **GAAM** — Governance Accountability Attribution Module
 - **GATM** — Governance Accountability Traceability Module
 - **GACM** — Governance Accountability Continuity Module
 - **GAVM** — Governance Accountability Verification Module
-

6. Governance Validation Standard (GVS)

Governed Space: Governance Validation

Core Question: How is governance validated?

Modules:

- **GVM** — Governance Verification Module
 - **GCM** — Governance Compliance Module
-

- **GEVM** — Governance Evidence Validation Module
 - **GVAM** — Governance Validation Audit Module
 - **GCORM** — Governance Correction Module
-

7. Governance Integrity Standard (GIS)

Governed Space: Governance Integrity

Core Question: How is governance protected from manipulation?

Modules:

- **GIMM** — Governance Integrity Monitoring Module
 - **GCIM** — Governance Conflict of Interest Module
 - **GMDM** — Governance Manipulation Detection Module
 - **GSM** — Governance Safeguard Module
 - **GBRM** — Governance Breach Response Module
-

8. Governance Transparency Standard (GTS)

Governed Space: Governance Transparency

Core Question: How visible and understandable must governance be?

Modules:

- **GVM** — Governance Visibility Module
 - **GEM** — Governance Explainability Module
 - **GDM** — Governance Documentation Module
 - **GDISM** — Governance Disclosure Module
 - **GTM** — Governance Traceability Module
-

9. Governance Continuity Standard (GCS)

Governed Space: Governance Continuity

Core Question: How does governance remain functional over time?

Modules:

- **GSM** — Governance Succession Module
 - **GTM** — Governance Transition Module
 - **GRM** — Governance Resilience Module
 - **GKPM** — Governance Knowledge Preservation Module
 - **GRCM** — Governance Recovery Module
-

10. Governance Interoperability Standard (GOIS)

Governed Space: Governance Interoperability

Core Question: How do multiple governance systems operate together?

Modules:

- **GCM** — Governance Compatibility Module
 - **GCDM** — Governance Coordination Module
 - **GTRM** — Governance Translation Module
 - **GCRM** — Governance Conflict Resolution Module
 - **GALM** — Governance Alignment Module
-

GOA™ Architecture Summary

Parent Standards: 10

Core Modules: 50

Core Governed Spaces

- Governance Authority
 - Governance Boundaries
 - Governance Scope
 - Governance Delegation
 - Governance Accountability
 - Governance Validation
 - Governance Integrity
 - Governance Transparency
 - Governance Continuity
 - Governance Interoperability
-

GOA™ Navigation Layer

Core Questions Map

- **GAS** → Who has the legitimate authority to govern?
 - **GBS** → Where are the governance boundaries?
 - **GSS** → What falls within governance?
 - **GDS** → How may governance authority be delegated?
 - **GAS-A** → Who remains accountable for governance outcomes?
 - **GVS** → How is governance validated?
 - **GIS** → How is governance protected from manipulation?
 - **GTS** → How visible and understandable must governance be?
 - **GCS** → How does governance remain functional over time?
 - **GOIS** → How do multiple governance systems operate together?
-

Architectural Position

GOA™ governs the complete governance lifecycle.

The architecture progresses:

Governance Authority → **Governance Boundaries** → **Governance Scope** →
Governance Delegation → **Governance Accountability** → **Governance Validation** →
Governance Integrity → **Governance Transparency** → **Governance Continuity** →

Governance Interoperability

Together these standards govern how governance is established, bounded, delegated, validated, protected, understood, preserved, and coordinated across organizations, institutions, governments, AI systems, autonomous systems, and future governance ecosystems.

Canonical Principle

GOA™ does not govern a specific operational domain. GOA™ governs how governance itself remains legitimate, accountable, validated, protected, transparent, continuous, interoperable, and trustworthy throughout its complete lifecycle.
