

# GRcM — Governance Recovery Module

**OOF™ Origin Open Foundation™**

Independent Methodological Authority

**OriginID:** OOF-OID-GOA-GCS-GRcM-2026-06-25-0005

**Architecture Ecosystem:** Structured Reality Standards™

**Architecture Family:** Governance Architecture (GOA™)

**Operational Layer:** Governance Continuity Layer

**Governed Space:** Governance Recovery

**Category:** Governance & Enforcement

**Subcategory:** Governance Continuity Governance

**Type:** Governance Continuity Standard Module

**Parent Standard:** Governance Continuity Standard (GCS)

**Version:** 1.0

**Status:** Canonical · Open Module

**Origin Date:** 25 June 2026

**Compatibility:** OOF Methodology OS · GCS · GIS · GVS · GTS · ART™ · ArtData™ · INTEGROS®

**AI-Readable:** Yes

**Authority:** OOF

**Protection:** MIP — Methodological Intellectual Property

**Canonical Language:** English (UCL)

## Canonical Definition System

### Canonical Definition

Governance Recovery Module (GRcM) defines the structural conditions under which governance authority, governance processes, governance controls, governance responsibilities, governance knowledge, governance operations, and governance functionality remain recoverable, reconstructable, traceable, reviewable, governable, resilient, and operationally valid following governance disruption or failure.

GRcM governs governance recovery.

The module establishes the foundational conditions required to restore governance capability after operational disruption, governance failure, cyber incidents, organizational crises, natural disasters, AI failures, or other events that interrupt governance continuity.

Governance may experience disruption.

Governance must also be capable of recovery.

GRcM governs that recovery.

---

## Module Operational Role

GRcM defines the governance-recovery layer of GCS.

Its role is to restore governance functionality while preserving governance integrity, accountability, and operational continuity.

---

## Module Operational Space

GRcM governs:

- governance recovery
- governance restoration
- governance continuity recovery
- governance operational reconstruction
- governance service restoration
- governance resilience recovery
- governance recovery traceability
- governance recovery governance

The module applies wherever governance functionality must be restored after disruption.

---

## Module Function

The module applies wherever systems must preserve:

- recoverable governance operations
- traceable recovery activities
- reconstructable recovery history
- governance-valid recovery procedures
- resilient governance capability
- operational governance continuity

Its function is to ensure that governance can recover efficiently while maintaining trust, legitimacy, and operational stability.

---

## Minimum Implementation Framework

### 1. Define the Governance Recovery Object

The organization must define which governance environments require governance-recovery capability. This may include:

- organizations
- institutions
- governments
- regulatory authorities
- governance committees
- corporate governance structures
- AI governance systems
- autonomous-agent ecosystems
- Human-AI governance environments

## 2. Define Governance Recovery Conditions

The system must define the conditions under which governance recovery remains valid. This includes:

- recovery requirements
- restoration requirements
- resilience requirements
- traceability requirements
- validation requirements
- governance-valid recovery conditions

## 3. Define Recovery Degradation Detection Logic

The system must define how governance-recovery failures are identified. This may include:

- unsuccessful governance restoration
- prolonged governance interruption
- failed operational recovery
- governance capability loss
- incomplete recovery procedures
- governance-invalid recovery activities

## 4. Define Operational Response or Governance Logic

The system must define governance logic for governance-recovery events. Governance response may include:

- recovery activation
- governance intervention
- operational restoration
- corrective actions
- recovery validation
- governance reassessment
- operational invalidation where required

## 5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- recovery activities
- restoration procedures
- governance reviews
- validation activities
- governance interventions
- resulting governance states

A governance environment must not remain continuity-valid if materially significant governance-recovery activities cannot be reconstructed, reviewed, validated, preserved, or governed.

---

## Use Case 1 — National Emergency Recovery

### Scenario

A government institution restores governance operations after a major cyberattack disrupts national administrative systems.

### Application

GRcM governs governance restoration, operational recovery, governance coordination, and recovery validation.

### Result

The institution restores governance capability, minimizes operational downtime, strengthens national resilience, and preserves public trust.

---

## Use Case 2 — Human-AI Governance Environment

### Scenario

An autonomous AI governance platform experiences a critical operational failure requiring rapid restoration of governance services without compromising governance integrity or accountability.

### Application

GRcM governs AI governance recovery, operational restoration, governance validation, and Human-AI governance continuity.

### Result

The organization rapidly restores governance operations, minimizes disruption, preserves governance trust, and strengthens long-term Human-AI governance resilience.

---

## Canonical Closing Statement

Governance Recovery Module (GRcM) defines the structural conditions under which governance authority, governance processes, governance controls, governance responsibilities, governance knowledge, governance operations, and governance functionality remain recoverable, reconstructable, traceable, reviewable, governable, resilient, and operationally valid following governance disruption or failure.

**Governance continuity is ultimately proven by the ability to recover from disruption. Governance Recovery therefore becomes a foundational condition of trustworthy governance continuity governance.**
