

Human-AI Cognition Integrity Standard (HAICS)

Architecture Family: Cognitive Governance Intelligence Architecture (CLIA®)

Operational Layer: Human-AI Cognition Governance Layer

Category: AI & Interpretation

Subcategory: Human-AI Cognition Governance Architecture

Defines the conditions under which cognition emerging through interaction, cooperation, augmentation, reasoning, interpretation, decision support, and shared cognitive processes between humans and AI systems remains traceable, coherent, accountable, reality-connected, governance-valid, and operationally reliable.

HAICS addresses shared cognition, cognitive augmentation, Human-AI decision support, cognitive authority, trust calibration, reliance governance, cognition synchronization, contribution traceability, and accountability across Human-AI cognition environments.

Relevant for AI assistants, copilots, decision-support systems, enterprise AI ecosystems, healthcare environments, education systems, research environments, Human-AI teams, autonomous collaboration systems, and future Human-AI cognition ecosystems.
