

Honey Blend Transparency Module (HBTM)

OriginID: OOF-OID-PD-HIS-HBTM-2026-04-04-0001

Category: Product & Design

Subcategory: Honey Integrity

Module: Honey Blend Transparency Module

Type: Classification and Transparency Module

Standard: Honey Integrity Standard (HIS)

Version: 1.0

Status: Canonical Module

Effective Date: 4 April 2026

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL™)

A. Module Abstract

The Honey Blend Transparency Module (HBTM) defines the conditions under which honey may be combined with natural substances while maintaining full transparency and structural honesty.

The objective is to:

- eliminate hidden adulteration
- introduce a transparent alternative to illegal mixing
- preserve product integrity through disclosure
- create a separate category distinct from honey

This module does not redefine honey.

It defines **transparent honey-based blends**.

B. Canonical Definition

A Honey Blend is a product composed of honey and natural substances, where:

- honey remains the primary component
- all additional substances are declared
- the product is not presented as pure honey

A Honey Blend is not honey.

It is a **separate, declared product category**.

C. Structural Base

This module is based on:

- Transparency Principle
- Non-Deception Rule
- Natural Composition Requirement
- Category Separation Principle

Blending must never be hidden.

Blending must never simulate pure honey.

D. Composition Rules

1. Primary Component Rule

- Honey **MUST** remain the dominant component
 - Minimum recommended threshold: >50% honey
-

2. Natural Substance Requirement

Additional components **MUST**:

- be of natural origin
 - be suitable for human consumption
 - match the quality level of honey
-

Allowed Examples

- natural syrups (e.g. date, rice, plant-based)
 - natural extracts
 - natural liquids compatible with consumption
-

3. Quality Alignment Requirement

Added substances **MUST NOT**:

- reduce overall product quality below honey standard
 - introduce synthetic or artificial elements
-

E. Transparency Requirement (Critical)

The product **MUST** clearly declare:

- percentage of honey
 - percentage of added substances
 - full composition
-

Example

Honey: 80%

Natural Syrup: 20%

No hidden composition is permitted.

F. Naming Rule (Non-Negotiable)

The product MUST NOT be labeled as:

- **"Honey"**
-

Allowed naming:

- Honey Blend
 - Honey + [Declared Ingredient]
 - Natural Honey Blend
-

Principle

If it is blended,
it is not honey.

G. Processing Rule

Blending MUST:

- not involve chemical processing
 - not degrade honey integrity before blending
 - maintain natural composition
-

H. Use Case — Functional Liquid Honey

Scenario

A producer requires a more liquid form for:

- beverages
 - mixing
 - dosing
-

Application

- honey is blended with natural syrup
 - full transparency is declared
 - product is labeled as Honey Blend
-

Result

- consistent liquid form
 - preserved quality
 - no deception
-

I. Use Case — Market Correction

Scenario

Illegal honey mixing exists in the market.

Application

- blending becomes transparent
 - hidden adulteration becomes unnecessary
 - clear category is introduced
-

Result

- reduced fraud
 - clearer product distinction
 - improved consumer trust
-

J. Threshold Logic

Product condition is:

- **VALID** → fully declared Honey Blend
- **INVALID** → hidden or misleading composition

No partial compliance is permitted.

K. Structural Principle

Transparency defines legitimacy.

Blending without transparency is deception.

Canonical Closing Statement

If honey is mixed, it must be declared.

Honey Blend Transparency Module establishes a clear boundary:
pure honey and blended products must never be confused.

Honesty is the only acceptable form of blending.
