

Honey Integrity Standard (HIS)

OriginID: OOF-OID-PD-HIS-2026-04-04-0001

Category: Product & Design

Subcategory: Honey Integrity

Type: Product Integrity Standard

Version: 1.0

Status: Canonical · Open Standard

Effective Date: 4 April 2026

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL™)

A. Standard Abstract

The Honey Integrity Standard (HIS) defines the structural conditions under which honey preserves its natural composition, biological activity, and origin authenticity throughout its lifecycle.

The objective is to ensure that:

- honey remains 100% natural
- no substances are added or removed
- biological integrity is preserved
- processing does not degrade quality
- origin remains transparent and traceable

This standard does not redefine honey.
It defines integrity conditions of honey.

B. Canonical Definition

Honey Integrity (HIS) is the condition in which honey remains:

- compositionally pure
- biologically active
- non-degraded by processing
- traceable to its origin

Honey must remain in its natural state as produced by bees, without alteration, dilution, or structural degradation.

C. Structural Base

This standard is based on:

- Natural Composition Principle
- Non-Intervention Principle

- Biological Preservation Principle
- Origin Transparency Principle

Honey is not a processed product.
It is a natural biological substance.

D. Scope

This standard applies to:

- raw honey
- filtered honey (minimal processing only)
- direct-to-consumer honey
- premium and natural honey products

This standard does not apply to:

- honey-based products
 - flavored honey
 - honey mixtures or blends
-

E. Structural Requirements

1. Composition Integrity

Honey MUST:

- consist of 100% honey
 - contain no additives
 - contain no external sugars or syrups
-

2. Non-Dilution Requirement

Honey MUST NOT:

- be diluted
 - be mixed with water
 - be mixed with syrups or external substances
-

3. Non-Blending Requirement (Critical)

Honey MUST NOT:

- be blended across unknown or mixed origins
 - be labeled ambiguously (e.g. "EU / non-EU blend")
-

Definition

If honey is blended without full origin transparency:

→ it is not considered integrity-preserved honey

4. Thermal Integrity Requirement

Honey MUST NOT be exposed to temperatures that degrade its natural biological structure.

This includes:

- enzyme degradation
 - structural alteration
 - loss of natural activity
-

Principle

Honey must remain in its natural biological state.

5. Processing Integrity

Allowed processing:

- natural settling
 - minimal filtration
 - mechanical separation
-

Not allowed:

- excessive heating
 - industrial processing altering structure
 - chemical treatment
-

6. Origin Transparency Requirement

Honey MUST:

- be traceable to a defined origin
 - clearly state source (region / beekeeper / batch)
-

Not allowed:

- anonymous origin
 - mixed-source without disclosure
-

7. Biological Integrity Condition

Honey must preserve:

- natural enzymes
 - biological activity
 - structural composition
-

Critical Principle

Processing must not convert honey into a biologically inactive substance.

F. Prohibited Practices

The following are prohibited:

- addition of sugar syrups
 - artificial feeding affecting final product
 - high-temperature processing
 - industrial homogenization degrading structure
 - misleading labeling of origin
-

G. Classification

HIS-Compliant Honey

- 100% pure
- non-degraded
- traceable
- biologically active

Non-Compliant Honey

- blended without transparency
- thermally degraded
- diluted or altered

H. Threshold Logic

Honey condition is:

VALID → meets all integrity conditions

INVALID → any violation present

No partial compliance is permitted.

I. Compatibility

This standard operates within:

- Origin Eco™
- Product Integrity Systems
- Natural Food Frameworks

J. Licensing & Usage

Reference use of this standard is permitted.

Commercial or certification-level implementation may require authorization under:

MIP™ — Methodological Intellectual Property

Structural Principle

Honey is defined by nature.

Integrity is defined by handling.

Canonical Closing Statement

Honey is already defined.

Honey Integrity Standard (HIS) defines whether that definition is preserved or violated.

If honey is altered, degraded, or obscured,
it may remain honey by name —
but not by integrity.

Module Architecture

Module 1 — HBTM: Honey Blend Transparency Module

Module 2 — HSFM: Honey Solid Form Module

Module 3 — HDWM: Honey Dissolvable Wrapper Module
