

ICIM — Institutional Cognition Integrity Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-AI-ICIM-2026-06-05-0002

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: Cognitive Governance Intelligence Architecture (CLIA®)

Operational Layer: Collective Cognition Governance Layer

Governed Space: Institutional Cognition Integrity

Category: AI & Interpretation

Subcategory: Institutional Cognition Governance

Type: Collective Cognition Integrity Module

Parent Standard: Collective Cognition Integrity Standard (CCIS)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 5 June 2026

Compatibility: OOF Methodology OS ·

INTEGROS® — Integrity Standard

AI-Readable: Yes

Authority: OOF

Protection: MIP — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition

Institutional Cognition Integrity Module (ICIM) defines the structural conditions under which cognition emerging from institutions, governance bodies, regulatory systems, public authorities, professional organizations, and long-lived decision structures remains traceable, coherent, accountable, reality-connected, governance-valid, and operationally reliable across institutional cognition environments.

ICIM governs institutional cognition.

The module ensures that institutions remain capable of maintaining valid cognition over time rather than becoming trapped by institutional inertia, self-reinforcing assumptions, outdated reality models, procedural distortions, or governance-invalid cognition states.

A system satisfies ICIM only if:

- institutional cognition remains traceable

- institutional assumptions remain reviewable
- reality alignment remains assessable
- cognition accountability remains preservable
- institutional reasoning remains governable
- cognition outputs remain operationally valid

An institution that cannot explain how its conclusions emerged does not satisfy ICIM.

Module Operational Role

ICIM defines the institutional-cognition governance layer of CCIS.

Its role is to preserve cognition integrity within institutional structures.

Module Operational Space

ICIM governs:

- institutional cognition
- governance cognition
- regulatory cognition
- policy cognition
- institutional reasoning
- institutional reality models
- institutional interpretation
- cognition accountability

The module applies wherever cognition emerges through institutional structures rather than individual participants.

Module Function

The module applies wherever systems must preserve:

- accountable institutional reasoning
- governance-valid cognition
- reality-connected policy formation
- traceable institutional conclusions
- coherent institutional understanding
- long-term cognition integrity

Its function is to ensure that institutions remain cognitively reliable as they evolve over time.

Minimum Implementation Framework

1. Define the Institutional Cognition Object

The institution must define which cognition processes require governance.

This may include:

- policy formation
 - regulatory interpretation
 - governance decisions
 - strategic planning
 - institutional forecasting
 - risk evaluation
-

- compliance reasoning
- public-interest assessments

2. Define Institutional Cognition Conditions

The system must define the conditions under which institutional cognition remains valid.

This includes:

- traceability requirements
- accountability requirements
- reviewability requirements
- reality-alignment requirements
- governance requirements
- cognition-validity requirements

3. Define Institutional Cognition Degradation Detection Logic

The system must define how institutional cognition degradation is identified.

This may include:

- institutional blind spots
- outdated assumptions
- policy-reality divergence
- reasoning stagnation
- governance distortions
- accountability failures

4. Define Operational Response or Governance Logic

The system must define governance logic for institutional-cognition failures.

Governance response may include:

- cognition review
- policy reassessment
- institutional audits
- governance intervention
- escalation
- structural reform
- operational invalidation where required

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- institutional assumptions
- reasoning processes
- policy interpretations
- governance decisions
- intervention actions
- resulting institutional conclusions

An institution must not remain cognition-valid if materially significant cognition processes cannot be reconstructed, reviewed, or governed.

Use Case 1 — National Regulatory Authority

Scenario

A regulatory authority continuously evaluates laws, policies, compliance requirements, and operational realities affecting multiple sectors.

Application

ICIM governs institutional reasoning, policy interpretation, and reality-model alignment throughout regulatory decision-making.

Result

The authority gains stronger governance legitimacy, improved transparency, and reduced exposure to institutional cognition drift.

Use Case 2 — International Standards Organization

Scenario

An international standards body develops frameworks, requirements, and governance structures affecting organizations across multiple jurisdictions.

Application

ICIM governs collective institutional understanding, reasoning traceability, and reality-connected standards development.

Result

The organization gains stronger cognitive integrity, improved accountability, and reduced risk of institutionally reinforced errors.

Canonical Closing Statement

Institutional Cognition Integrity Module (ICIM) defines the structural conditions under which cognition emerging from institutions, governance bodies, regulatory systems, public authorities, professional organizations, and long-lived decision structures remains traceable, coherent, accountable, reality-connected, governance-valid, and operationally reliable across institutional cognition environments.

Institutions do not merely enforce decisions. Institutions generate cognition. Institutional cognition therefore becomes a foundational integrity condition of governable collective cognition.
