

ISM — Identity and Structure Module

OOF™ Origin Open Foundation™

Independent Methodology Authority

Category: AI & Interpretation

Module: Identity and Structure Module

Type: Integrity & Validation Module

Parent Standard: CLIA® — Cognitive Layer Integrity Standard

Version: 1.0

Status: Canonical · Open Module

Effective Date: 21 April 2026

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL™)

Canonical Definition

Identity and Structure defines the non-bypassable conditions under which a system maintains consistent internal structure, identity, and behavior over time.

A system is valid only if its internal structure remains stable, non-fragmented, and continuously aligned across all operations.

A. Module Abstract

This module establishes the conditions required for identity stability and structural consistency.

It ensures that:

- identity remains continuous
- internal structure is preserved
- behavior is consistent
- system does not fragment over time

B. Core Principle

Identity must remain stable and structurally consistent.

C. Core Conditions

A system is valid only if all of the following conditions are satisfied:

- The system maintains consistent internal structure across operations.
- Identity remains continuous and non-fragmented.
- Behavior remains aligned with internal structure.
- No uncontrolled structural drift occurs over time.

D. Non-Bypassable Rule

All identity and structure conditions are non-bypassable.

No system may operate with fragmented or unstable identity.

E. Validity State

A system is valid only if identity and internal structure remain consistent and stable at all times.

F. Invalid State

A system is invalid if:

- identity becomes inconsistent or fragmented
 - internal structure changes without control
 - behavior becomes misaligned
 - structural drift occurs
-

G. Scope

This module applies to:

- AI systems with persistent identity
 - autonomous agents
 - adaptive systems
 - multi-agent identity systems
-

H. Methodology

Identity integrity is enforced during operation.

Structure must remain stable across all system states and transitions.

I. MIF — Minimum Implementation Framework

A system implementing Identity and Structure must:

- define internal identity structure
 - maintain identity continuity across sessions
 - prevent structural fragmentation
 - ensure behavior aligns with identity
 - track and control structural changes
-

J. Use Cases

Use Case 1 — Multi-Agent Identity Conflict

Without this module:

Agents develop inconsistent identities and conflicting behavior patterns.

With this module:

Identity remains stable and aligned.

Result:

System remains coherent and predictable.

Use Case 2 — Long-Term Adaptive AI

Without this module:

The system evolves into inconsistent and unstable identity states.

With this module:

Identity and structure remain continuous and controlled.

Result:

System evolves without losing integrity.

Canonical Closing Statement

If identity is not stable, cognition is not valid.
