

INTEGROS® — Minimum Implementation Framework (MIF)

Governance & Enforcement

Purpose

This framework defines the minimum conditions required to implement INTEGROS® in any system.

It enables immediate adoption without certification or system redesign.

Implementation Principle

Integrity is not implemented through policy.

It is implemented through system structure.

Core Implementation Requirements

All conditions MUST be implemented.

1. Traceability

The system MUST ensure:

- all actions are recorded
 - actions are time-linked
 - actions are attributable
 - system behavior is reconstructable
-

2. Structural Consistency

The system MUST ensure:

- rules remain consistent
 - all changes are recorded
 - deviations are detectable
-

3. Verification Capability

The system MUST allow:

- independent verification
 - auditability
 - validation of system behavior
-

4. Manipulation Detection

The system MUST detect:

- unauthorized changes
 - data manipulation
 - process bypass
-

5. Integrity State Transparency

The system MUST define:

- valid state
 - compromised state
 - restored state
-

6. Chain of Control

The system MUST define:

- responsible entities
 - authority structure
 - control transitions
-

Operational Condition

All conditions MUST:

- operate continuously
 - exist in real time
 - be verifiable at any moment
-

Non-Compliance

The system is NOT compliant if:

- actions are not traceable
 - manipulation cannot be detected
 - behavior cannot be verified
-

Core Rule

If integrity is not enforceable, it does not exist.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.

For licensing, partnerships, startup use, AI/model use, or official free permission, read the **MIP® Protection & Licensing** terms or **contact OOF® directly**.
