

About INTEGROS® — Integrity Standard

Governance & Enforcement

Canonical Definition

INTEGROS® defines the conditions under which a system remains traceable, verifiable, and resistant to manipulation.

Integrity means: a system cannot be modified, manipulated, or bypassed without detection.

What This Standard Is

INTEGROS® defines integrity as a structural property of a system.

It ensures that:

- actions can be traced
- system behavior can be verified
- manipulation can be detected

INTEGROS® operates as the foundational integrity layer.

Without it, no system can be considered reliable.

What This Standard Is Not

INTEGROS® is not:

- a certification
- an audit service
- a compliance label
- a one-time verification

It does not confirm integrity.

It defines the conditions under which integrity exists.

The Core Problem

Most systems rely on:

- trust
- certification
- periodic checks

But:

- systems change
- data can be manipulated
- processes can be bypassed

Integrity becomes assumed — not proven.

What INTEGROS® Solves

INTEGROS® ensures that:

- system behavior is always traceable
 - manipulation is always detectable
 - integrity can be independently verified
-

Why This Matters

Without structural integrity:

- systems cannot be trusted
- decisions cannot be verified
- manipulation can remain hidden

With INTEGROS®:

- integrity is observable
 - trust is measurable
 - risk is reduced
-

Core Insight

Certification proves that something was valid.

Integrity proves that it remains valid.

System Role

INTEGROS® is the root layer of system validity.

It enables:

- governance (CGRM)
 - responsibility (RTI)
 - asset identity (AIS)
 - value activation (VAS)
 - value flow (VFM)
-

Closing Statement

A system cannot be trusted because it was verified once.

It can only be trusted when it remains verifiable.
