

Herbal Infused Water Module (HIW™)

Parent Standard: Infused Water Standard (IWS™)

Category: Product & Design

Subcategory: Infused Water

Type: Product Module

Version: 1.0

Status: Canonical · Open Module

Effective Date: 25 April 2026

Authority: OOF®

Protection: MIP® — Methodological Intellectual Property

Canonical Language: English (UCL™)

Compatibility: IWS™ · Origin Eco™ · Product Integrity
Standards · Natural Systems

Canonical Definition

Herbal Infused Water Module (HIW™) defines the product-specific conditions under which water may be naturally enriched through contact with herbal source material while remaining structurally identifiable as water and suitable for continuous hydration.

Herbal infused water is valid only when plant-based infusion enriches the medium without transforming water into tea, extract, supplement, or flavored beverage.

Module Position

This module operates under the **Infused Water Standard (IWS™)**.

IWS™ defines the parent category boundary.

HIW™ defines the herbal application of that boundary.

The module specifies when herbal source materials may be used to produce valid infused water without loss of hydration identity.

Base

Water remains the primary medium.

Herbal material provides natural contact-based release.

The output remains water.

The process does not create a new beverage system.

It preserves hydration while allowing controlled natural enrichment.

Core Principle

Herbal infusion may enrich water.
It must not redefine it.

A valid herbal infused water system depends on controlled release,
low transformation intensity, and preservation of water identity.

Product Conditions

For herbal infused water to remain valid within this module,
it must:

- use water as the dominant medium
- use herbal source material suitable for human consumption
- rely on passive contact-based release
- avoid direct additive substitution
- remain suitable for repeated hydration use

Valid herbal source materials may include:

- leaves
- flowers
- roots
- stems
- whole herbs suitable for water contact

All source materials must remain:

- safe
 - clean
 - naturally suitable for infusion use
-

Integrity Principle

Herbal infused water remains valid only when:

- infusion is real and contact-based
- no additive logic replaces herbal release
- no excessive intensity transforms the product into a beverage system
- output remains structurally water

If herbal identity becomes dominant over hydration identity,
the product exits this module.

Minimum Implementation Framework (MIF)

Step 1 — Water Base

Use clean water suitable for repeated hydration.

Minimum requirement:

- water must remain the dominant medium
 - no direct additive enrichment may replace infusion
-

Step 2 — Herbal Source Selection

Use herbal source material suitable for water contact and human consumption.

Minimum requirement:

- source material must be clean
 - source material must be naturally suitable
 - no synthetic flavor substitution is permitted
-

Step 3 — Infusion Application

Apply a valid infusion process through contact-based release.

Permitted methods may include:

- cold infusion
- hot infusion
- controlled low-intensity decoction where water identity remains preserved

Minimum requirement:

- release must occur through contact
 - no direct substance addition may simulate infusion
-

Step 4 — Intensity Control

Control time, temperature, and source intensity.

Minimum requirement:

- the process must not transform the output into tea, extract, or flavor-dominant beverage
 - hydration identity must remain stronger than sensory dominance
-

Step 5 — Output Validation

Confirm final state.

Minimum requirement:

- water remains dominant
 - output is suitable for continuous hydration
 - product is not structurally classified as a flavored beverage, extract, or supplement
-

Output Definition

Herbal Infused Water (HIW™ compliant) is water that:

- contains naturally released herbal compounds
 - remains structurally water
 - supports hydration through low-intensity natural enrichment
 - is suitable for repeated consumption within hydration context
-

Structural Limitation

This module excludes:

- concentrated herbal extracts
- medicinal decoctions
- additive-based hydration systems
- flavor-dominant beverages
- products whose transformation exceeds water identity

These may be valid products in other categories.

They are not valid within Herbal Infused Water under HIW™.

Use Case 1 — Daily Herbal Hydration

Scenario

An individual integrates low-intensity herbal infusion into daily hydration.

Application

- herbal material is infused into water under controlled conditions
- no additives are used
- product remains suitable for repeated daily use

Result

- hydration is naturally enriched
 - water intake becomes more appealing without category drift
 - the product remains structurally clean and trustworthy
-

Use Case 2 — Clean Hydration Product

Scenario

A brand develops plant-based hydration products using herbal infusion instead of synthetic flavoring.

Application

- herbal infusion replaces artificial flavor logic
- source material remains transparent
- process remains compatible with HIW™ and IWS™ conditions

Result

- clean-label hydration product
 - scalable product logic
 - clearer distinction from flavored beverages and supplement-like drinks
-

One-Line Definition

Herbal Infused Water is water naturally enriched through herbal contact-release while remaining structurally valid for continuous

hydration.

Canonical Closing Statement

**Plants may enrich water.
They must not redefine it.**
