

About Integrity Assurance Standard - (IAS)

What Is Integrity Assurance Standard?

Integrity Assurance Standard (IAS) is the tenth Parent Standard of INTEGROS® — Integrity Governance Architecture. It governs how integrity is continuously verified, maintained, demonstrated, and assured after successful integrity restoration.

IAS recognizes that integrity is not permanently guaranteed simply because it has once been restored. Instead, integrity must remain continuously observable, measurable, governable, and supported by objective evidence throughout the complete operational lifecycle of every governed entity.

Canonical Definition

Integrity Assurance Standard (IAS) defines the governance conditions required to continuously verify, monitor, maintain, demonstrate, and assure integrity following successful integrity restoration. It establishes the assurance principles, monitoring requirements, validation mechanisms, evidence models, governance controls, and continuous oversight necessary to ensure that approved integrity conditions remain preserved throughout the complete lifecycle of a governed entity.

Why IAS Exists

Successful restoration marks the return of integrity, but not the end of integrity governance.

Operational environments constantly evolve. Systems change, new risks emerge, configurations are modified, users interact differently, and external conditions shift over time. Without continuous assurance, integrity may gradually degrade without timely detection.

IAS exists to ensure that restored integrity remains continuously verified, objectively demonstrated, and permanently governed.

What IAS Governs

IAS governs:

- Continuous integrity assurance
- Ongoing integrity monitoring
- Assurance validation
- Assurance evidence
- Assurance reporting
- Governance oversight
- Long-term integrity preservation

Use Case 1 — Autonomous AI GovernanceScenario

An autonomous AI platform has successfully completed integrity restoration after a verified integrity breach and resumes normal operation. Application

IAS continuously monitors integrity conditions, validates operational behavior, verifies assurance evidence, and detects emerging integrity risks before they become governance failures. Result

Integrity remains continuously demonstrable through objective monitoring, governance oversight, and auditable assurance evidence. Use Case 2 — Critical InfrastructureScenario

A national energy grid restores operational integrity after a cybersecurity incident and returns to continuous service. Application

IAS governs ongoing integrity monitoring, assurance validation, evidence collection, and governance reporting to ensure restored integrity remains continuously preserved despite operational changes. Result

The infrastructure maintains long-term operational trust through continuous integrity assurance supported by transparent governance and objective evidence.

Architectural Position

IAS represents the final governed space within INTEGROS® — Integrity Governance Architecture, completing the full integrity governance lifecycle. Governance Flow

Definition → Structure → Conditions → Measurement → State → Deviation → Breach → Response → Restoration → Assurance

Canonical Closing Statement

Integrity Assurance Standard establishes the canonical governance framework for continuously verifying, maintaining, and demonstrating integrity throughout the complete lifecycle of every governed entity. By defining how restored integrity is continuously assured through monitoring, validation, evidence, and governance oversight, IAS enables sustained trust, operational resilience, accountable governance, and continuous integrity preservation across all operational domains.
