

About Integrity Breach Standard - (IBS)

Determining When Integrity Has Been Materially Compromised

Not every integrity deviation constitutes an integrity breach. Governance requires a clear and objective determination of the point at which integrity is no longer considered preserved. This distinction enables consistent governance decisions, timely intervention, regulatory compliance, and organizational accountability.

What Is Integrity Breach Standard?

Integrity Breach Standard (IBS) is the seventh Parent Standard of INTEGROS® — Integrity Governance Architecture. It establishes the canonical governance conditions required to identify, verify, classify, assess, and govern integrity breaches throughout the complete lifecycle of a governed entity.

Canonical Definition

Integrity Breach Standard (IBS) defines the governance conditions required to identify, verify, classify, assess, and govern integrity breaches by establishing breach determination criteria, evidence requirements, severity models, and governance rules throughout the complete lifecycle of a governed entity.

Why IBS Exists

Detecting integrity deviations is only the beginning of governance.

Organizations must also determine when a deviation has crossed the governance threshold and become a material integrity breach requiring formal governance action.

Building upon the integrity deviation framework established by IDS, IBS defines the governance criteria used to determine when integrity has been materially compromised.

This provides a standardized foundation for initiating incident management, accountability processes, regulatory reporting, and recovery activities.

What IBS Governs

IBS governs the complete lifecycle of integrity breaches, including:

- breach identification
 - breach verification
 - breach classification
 - breach severity assessment
 - breach evidence
 - breach documentation
 - breach governance.
-

This governed space ensures that integrity breaches are recognized, evaluated, and governed consistently using objective evidence and standardized governance rules.

Architectural Position

Within INTEGROS® — Integrity Governance Architecture, IBS is the seventh Parent Standard in the governance flow:

Definition → Structure → Conditions → Measurement → State → Deviation → Breach
→ Response → Restoration → Assurance

IBS establishes the canonical transition from integrity deterioration to formal integrity failure, creating the governance foundation upon which response, restoration, and long-term assurance are built.

Canonical Closing Statement

Integrity Breach Standard establishes the canonical governance framework for identifying, verifying, classifying, assessing, and governing material integrity failures. By defining the point at which integrity is no longer considered preserved, IBS enables objective breach determination, accountable governance, structured response, and resilient recovery throughout the complete lifecycle of every governed entity.
