

About Integrity Condition Standard - (ICS)

Preserving Integrity Through Conditions

Integrity cannot be preserved by definition and structure alone. Every governed entity depends on a set of conditions that must remain continuously valid for integrity to exist. When these conditions are no longer satisfied, integrity begins to degrade regardless of how well the entity was originally designed.

What Is Integrity Condition Standard?

Integrity Condition Standard (ICS) is the third Parent Standard of INTEGROS® — Integrity Governance Architecture. It establishes the canonical governance conditions required to preserve integrity by defining the rules, constraints, dependencies, and operational requirements that must remain continuously satisfied throughout the complete lifecycle of a governed entity.

Canonical Definition

Integrity Condition Standard (ICS) defines the mandatory governance conditions that must remain continuously satisfied for a governed entity to preserve integrity by governing its rules, constraints, dependencies, and operational requirements throughout its complete lifecycle.

Why ICS Exists

A governed entity may have a well-defined integrity model and a structurally sound architecture, yet still lose integrity if the conditions required to preserve it are no longer maintained.

Building upon the structural foundation established by STIS, ICS defines the mandatory conditions required for integrity to remain valid throughout the governed lifecycle.

ICS exists to establish those mandatory governance conditions before integrity is measured, monitored, classified, or evaluated.

What ICS Governs

ICS governs the conditions required to preserve integrity, including:

- integrity conditions
 - governance rules
 - operational constraints
 - dependency conditions
 - boundary conditions
 - integrity prerequisites
 - operational validity.
-

This governed space ensures that integrity is maintained through explicitly governed conditions rather than assumptions.

Architectural Position

Within INTEGROS® — Integrity Governance Architecture, ICS is the third Parent Standard in the governance flow:

Definition → Structure → Conditions → Measurement → State → Deviation → Breach
→ Response → Restoration → Assurance

ICS transforms a structurally sound integrity model into one that remains continuously valid by governing the conditions required for its preservation before integrity measurement begins.

Canonical Closing Statement

Integrity Condition Standard establishes the mandatory governance conditions that preserve integrity throughout the complete lifecycle of a governed entity. By governing the rules, constraints, dependencies, and operational requirements upon which integrity depends, ICS provides the essential foundation for every subsequent integrity measurement, evaluation, response, restoration, and assurance activity within INTEGROS® Integrity Governance Architecture.
