

About Integrity Measurement Standard - (IMS)

Measuring Integrity Objectively

Integrity cannot be effectively governed through assumptions or subjective judgment. Once integrity has been defined, supported by an appropriate structure, and preserved through mandatory governance conditions, it must be measured objectively to determine whether it is being maintained throughout the lifecycle of a governed entity.

What Is Integrity Measurement Standard?

Integrity Measurement Standard (IMS) is the fourth Parent Standard of INTEGROS® — Integrity Governance Architecture. It establishes the canonical governance conditions required to objectively measure integrity by defining the metrics, indicators, thresholds, evaluation models, and scoring mechanisms used to assess integrity consistently throughout the complete lifecycle.

Canonical Definition

Integrity Measurement Standard (IMS) defines the governance conditions required to objectively measure integrity by establishing metrics, indicators, thresholds, evaluation models, and scoring mechanisms throughout the complete lifecycle of a governed entity.

Why IMS Exists

A governed entity may have a clearly defined integrity model, a structurally sound architecture, and valid operating conditions, but governance still requires objective evidence of whether integrity is actually being maintained.

Building upon the integrity conditions established by ICS, IMS defines how integrity is objectively measured and evaluated.

IMS exists to transform integrity from a governance concept into measurable operational reality before integrity states, deviations, and breaches are identified.

What IMS Governs

IMS governs the objective measurement of integrity, including:

- integrity metrics
 - integrity indicators
 - measurement models
 - evaluation methods
 - integrity thresholds
 - integrity scoring
 - measurement consistency.
-

This governed space ensures that integrity is measured objectively, consistently, and independently across all governed entities.

Architectural Position

Within INTEGROS® — Integrity Governance Architecture, IMS is the fourth Parent Standard in the governance flow:

Definition → Structure → Conditions → Measurement → State → Deviation → Breach
→ Response → Restoration → Assurance

IMS transforms governed integrity conditions into measurable evidence, providing the objective foundation required for integrity state classification and every subsequent governance activity.

Canonical Closing Statement

Integrity Measurement Standard establishes the governance framework required to measure integrity objectively and consistently. By governing metrics, indicators, thresholds, evaluation models, and scoring mechanisms, IMS provides the measurable foundation upon which integrity state evaluation, deviation detection, breach identification, restoration, and assurance are built throughout the complete lifecycle of every governed entity.
