

About Structural Integrity Standard - (STIS)

Preserving Integrity Through Structure

Integrity is not preserved by definition alone. Every governed entity depends on a structure capable of maintaining integrity as it operates, evolves, and interacts with other entities. Without a coherent structure, even a well-defined integrity model will eventually degrade.

What Is Structural Integrity Standard?

Structural Integrity Standard (STIS) is the second Parent Standard of INTEGROS® — Integrity Governance Architecture. It establishes the canonical governance conditions required to ensure that the structure of a governed entity is capable of preserving integrity consistently throughout its complete lifecycle.

Canonical Definition

Structural Integrity Standard (STIS) defines the structural conditions required for a governed entity to preserve integrity by governing its organization, components, relationships, dependencies, and structural coherence throughout its complete lifecycle.

Why STIS Exists

Integrity can only exist when supported by a stable and governable structure. Weak relationships, hidden dependencies, fragmented components, or inconsistent organization can undermine integrity even when its definition is correct.

STIS exists to ensure that integrity is supported by a structural foundation capable of sustaining it under normal operation, change, and long-term evolution.

What STIS Governs

STIS governs the structural foundations of integrity, including:

- structural organization
- component integrity
- relationship integrity
- dependency integrity
- structural coherence
- integrity-preserving architecture.

This governed space ensures that integrity remains structurally consistent before it is conditioned, measured, evaluated, or restored.

Architectural Position

Within INTEGROS® — Integrity Governance Architecture, STIS is the second Parent Standard in the governance flow:

Definition → Structure → Conditions → Measurement → State → Deviation → Breach
→ Response → Restoration → Assurance

STIS transforms the integrity definition established by INDS into a structure capable of preserving that integrity throughout the governed entity's lifecycle.

Canonical Closing Statement

Structural Integrity Standard establishes the structural foundation upon which integrity can endure. By governing components, relationships, dependencies, and structural coherence, STIS ensures that integrity remains resilient, sustainable, and governable throughout the complete lifecycle of any governed entity.
