

Boundary Condition Module (BCM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-ICS-BCM-2026-07-17-0004

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Condition Standard (ICS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Boundary Conditions

Version: 1.0

Status: Canonical · Open Module

Origin Date: 17 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Boundary Conditions

Canonical Definition

Boundary Condition Module (BCM) defines the governance conditions that establish the operational limits within which integrity remains valid. It governs the thresholds, boundaries, environmental limits, operational ranges, and contextual constraints beyond which integrity can no longer be considered preserved.

Operational Role

BCM governs the operational boundary conditions that determine whether a governed entity continues to operate within the limits required to preserve integrity. It ensures that integrity is evaluated not only by internal conditions but also by the operational boundaries within which those conditions remain valid.

Minimum Implementation Framework

1. Define Boundary Conditions

Identify every operational, organizational, environmental, technical, legal, and governance boundary within which integrity remains valid. Define the acceptable operating limits for the governed entity.

2. Define Boundary Requirements

Establish the governance requirements that specify acceptable operating ranges, threshold values, contextual limitations, tolerance levels, and permissible boundary conditions necessary to preserve integrity.

3. Define Boundary Violation Logic

Identify the conditions under which operational boundaries are exceeded, environmental limits are violated, tolerance levels are surpassed, or contextual changes invalidate the integrity conditions of the governed entity.

4. Define Governance Response

Define governance actions for detecting, reporting, mitigating, correcting, escalating, or suspending operations whenever boundary conditions are violated or no longer support integrity.

5. Preserve Boundary Records

Preserve boundary definitions, threshold values, governance approvals, operational exceptions, violation history, contextual changes, and supporting evidence throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous Vehicle

Scenario

An autonomous vehicle is approved to operate only within defined weather conditions, geographic regions, road classifications, and operational speed limits.

Application

BCM governs these boundary conditions and continuously validates that the vehicle remains within its authorized operational limits.

Result

The autonomous vehicle preserves operational integrity by remaining within the governed boundaries under which safe and legitimate operation has been validated.

Use Case 2 — Cloud Infrastructure Governance

Scenario

A cloud platform operates under defined security classifications, regional data residency requirements, infrastructure capacity limits, and regulatory jurisdictions.

Application

BCM governs these operational boundaries and detects when changes in infrastructure, regulation, or operating conditions exceed the approved integrity limits.

Result

The cloud platform maintains integrity by ensuring that operations remain continuously within the approved governance boundaries throughout its lifecycle.

Canonical Closing Statement

Integrity exists only within governed boundaries. Boundary Condition Module establishes the operational limits within which integrity remains valid, ensuring that every governed entity operates safely, consistently, and legitimately throughout its complete lifecycle.

OOF® MIP® Protection Notice
