

Integrity Assurance Monitoring Module (IAMM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IAS-IAMM-2026-07-21-0001

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Assurance Standard (IAS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Assurance Monitoring

Version: 1.0

Status: Canonical · Open Module

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Assurance Monitoring

Canonical Definition

Integrity Assurance Monitoring Module (IAMM) defines the governance framework for continuously monitoring integrity conditions after successful integrity restoration. It establishes monitoring objectives, observation mechanisms, integrity indicators, detection criteria, governance controls, and continuous oversight required to ensure that approved integrity conditions remain preserved throughout the complete lifecycle of a governed entity.

Operational Role

IAMM governs the continuous monitoring layer of integrity assurance by detecting integrity degradation, emerging governance risks, and operational changes before they develop into integrity deviations or breaches.

Minimum Implementation Framework

1. Define Monitoring Requirements

Identify the integrity conditions, monitored assets, operational indicators, monitoring frequency, thresholds, responsible governance authorities, and assurance objectives.

2. Define Monitoring Methodology

Establish standardized monitoring procedures, observation mechanisms, integrity metrics, alerting processes, reporting intervals, and governance review activities.

3. Define Monitoring Validation Logic

Define how monitored integrity conditions are evaluated for stability, consistency, compliance, operational reliability, governance conformity, and early detection of degradation.

4. Define Governance Response

Establish governance actions for detected anomalies, integrity deterioration, monitoring alerts, threshold violations, escalation procedures, corrective actions, and reassessment where necessary.

5. Preserve Monitoring Records

Maintain monitoring logs, integrity measurements, alerts, governance decisions, trend analyses, timestamps, corrective actions, and audit records throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform operates continuously after completing integrity restoration.

Application

IAMM continuously observes operational integrity indicators, detects abnormal behavioral changes, validates governance thresholds, and triggers early governance actions before integrity is compromised.

Result

Potential integrity degradation is identified early, enabling preventive governance and continuous operational trust.

Use Case 2 — Industrial Manufacturing

Scenario

A smart manufacturing facility resumes production after restoring operational

integrity.

Application

IAMM continuously monitors equipment integrity, production governance controls, operational consistency, and assurance indicators across the manufacturing environment.

Result

The facility maintains stable, trustworthy operations through continuous integrity monitoring supported by objective governance evidence.

Canonical Closing Statement

Integrity Assurance Monitoring Module establishes the canonical governance framework for continuously observing, measuring, and governing integrity conditions after restoration. It ensures that integrity remains proactively monitored, objectively evaluated, and continuously protected through standardized governance oversight, early detection mechanisms, and fully auditable operational evidence.
