

Integrity Assurance Reporting Module (IARM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IAS-IARM-2026-07-21-0004

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Assurance Standard (IAS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Assurance Reporting

Version: 1.0

Status: Canonical · Open Module

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Integrity Assurance Reporting

Canonical Definition

Integrity Assurance Reporting Module (IARM) defines the governance framework for preparing, managing, and communicating integrity assurance information throughout ongoing operations. It establishes reporting requirements, reporting structures, evidence references, communication principles, governance controls, and reporting accountability required to ensure that integrity assurance remains transparent, verifiable, traceable, and auditable throughout the complete lifecycle of a governed entity.

Operational Role

IARM governs the reporting layer of integrity assurance by transforming monitoring results, validation outcomes, governance decisions, and assurance evidence into standardized reports for operational, governance, audit, regulatory, and executive stakeholders.

Minimum Implementation Framework

1. Define Reporting Requirements

Identify the required assurance reports, reporting audiences, reporting frequency, governance objectives, mandatory content, evidence references, and reporting responsibilities.

2. Define Reporting Methodology

Establish standardized report structures, reporting templates, terminology, evidence references, approval workflows, publication procedures, and governance communication rules.

3. Define Reporting Validation Logic

Define how assurance reports are evaluated for accuracy, completeness, consistency, traceability, evidence alignment, governance compliance, and stakeholder suitability.

4. Define Governance Response

Establish governance actions for inaccurate reporting, missing reports, reporting inconsistencies, delayed reporting, corrective reporting activities, escalations, and regulatory notification requirements.

5. Preserve Reporting Records

Maintain published reports, governance approvals, supporting evidence references, communication records, reporting histories, timestamps, revisions, and audit archives throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An enterprise operating autonomous AI systems must periodically demonstrate continuous integrity assurance to executive leadership and governance authorities.

Application

IARM prepares standardized integrity assurance reports summarizing monitoring results, validation outcomes, governance activities, and supporting evidence.

Result

Decision-makers receive transparent, evidence-based assurance reports that objectively demonstrate the ongoing integrity of autonomous operations.

Use Case 2 — National Banking Infrastructure

Scenario

A national banking platform is required to provide regular integrity assurance

reports to financial regulators and internal governance boards.

Application

IARM governs the preparation, approval, and publication of standardized assurance reports supported by validated monitoring data and objective governance evidence.

Result

Regulators and governance authorities receive complete, consistent, and auditable reports demonstrating sustained operational integrity.

Canonical Closing Statement

Integrity Assurance Reporting Module establishes the canonical governance framework for communicating integrity assurance through standardized, transparent, evidence-based, and fully auditable reporting. It ensures that continuous integrity assurance remains objectively demonstrable, accountable, and understandable for all governance stakeholders throughout the complete lifecycle of every governed entity.
