

Integrity Assurance Validation Module (IAVM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IAS-IAVM-2026-07-21-0002

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Assurance Standard (IAS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Assurance Validation

Version: 1.0

Status: Canonical · Open Module

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Assurance Validation

Canonical Definition

Integrity Assurance Validation Module (IAVM) defines the governance framework for continuously validating that approved integrity conditions remain satisfied throughout ongoing operations. It establishes validation criteria, verification methods, evidence requirements, acceptance conditions, governance controls, and periodic reassessment mechanisms required to objectively confirm sustained integrity across the complete lifecycle of a governed entity.

Operational Role

IAVM governs the validation layer of integrity assurance by periodically confirming that monitored integrity conditions continue to satisfy approved governance requirements and remain supported by objective evidence.

Minimum Implementation Framework

1. Define Assurance Validation Requirements

Identify the integrity conditions to be validated, validation frequency, acceptance criteria, responsible validators, evidence requirements, and governance objectives.

2. Define Validation Methodology

Establish standardized validation procedures, verification techniques, reassessment schedules, governance checkpoints, approval workflows, and reporting processes.

3. Define Validation Logic

Define how integrity conditions are evaluated for continued compliance, consistency, operational reliability, governance conformity, evidence sufficiency, and long-term stability.

4. Define Governance Response

Establish governance actions for failed validation, declining integrity indicators, insufficient evidence, recurring validation failures, corrective actions, escalation, and reassessment where required.

5. Preserve Validation Records

Maintain validation reports, reassessment results, supporting evidence, governance approvals, validation schedules, corrective actions, timestamps, and audit documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform has operated continuously for several months following successful integrity restoration.

Application

IAVM performs scheduled integrity validations to confirm that governance constraints, operational behavior, integrity indicators, and supporting evidence continue to satisfy approved assurance requirements.

Result

Integrity remains objectively demonstrated through recurring validation supported by transparent governance evidence.

Use Case 2 — Financial Services

Scenario

A digital payment platform continuously processes millions of financial

transactions after recovering from an operational integrity incident.

Application

IAVM periodically validates transaction integrity, governance compliance, operational controls, and supporting evidence to ensure that integrity remains continuously assured.

Result

Financial operations maintain long-term trust through objective, recurring integrity validation supported by standardized governance controls.

Canonical Closing Statement

Integrity Assurance Validation Module establishes the canonical governance framework for continuously validating sustained integrity through standardized verification, objective evidence, recurring assessment, and accountable governance. It ensures that integrity assurance remains demonstrable, measurable, and fully auditable throughout the complete lifecycle of every governed entity.
