

Integrity Criteria Module (ICRM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-INDS-ICRM-2026-07-17-0003

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Definition Standard (INDS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Criteria

Version: 1.0

Status: Canonical · Open Module

Origin Date: 17 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Criteria

Canonical Definition

Integrity Criteria Module (ICRM) defines the canonical criteria that a governed entity must satisfy to be recognized as maintaining integrity. It establishes the formal conditions against which integrity can be consistently evaluated, measured, and independently verified throughout the entity's complete lifecycle.

Module Purpose

ICRM transforms the definition of integrity into explicit evaluation criteria. It specifies the characteristics, properties, and requirements that determine whether integrity is present, maintained, degraded, or absent.

Without defined criteria, integrity remains subjective and cannot be governed consistently.

Operational Role

ICRM provides the objective reference criteria used by all subsequent integrity governance processes, ensuring that integrity assessments are based on predefined and transparent standards rather than individual interpretation.

Operational Space

ICRM governs:

- integrity criteria
 - evaluation requirements
 - qualification conditions
 - consistency requirements
 - integrity qualification rules.
-

Minimum Implementation Framework

An implementation of ICRM should define:

- integrity criteria
 - mandatory requirements
 - optional requirements
 - evaluation logic
 - acceptance conditions.
-

Example Use Cases

Use Case 1 — AI Governance

Define the criteria that an autonomous AI system must satisfy to maintain behavioral and operational integrity.

Use Case 2 — Document Integrity

Establish the criteria required for a document to be considered complete, authentic, accurate, and unaltered throughout its lifecycle.

Canonical Closing Statement

Integrity can only be evaluated against clearly governed criteria. Integrity Criteria Module establishes the objective conditions that transform the concept of integrity into a measurable, governable, and independently verifiable reference for every governed entity.
