

Integrity Evaluation Module (IEM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IMS-IEM-2026-07-17-0004

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Measurement Standard (IMS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Evaluation

Version: 1.0

Status: Canonical · Open Module

Origin Date: 17 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Evaluation

Canonical Definition

Integrity Evaluation Module (IEM) defines the governance methods used to evaluate integrity by interpreting integrity metrics, indicators, thresholds, and supporting evidence. It establishes the standardized evaluation process required to determine the current integrity condition of a governed entity throughout its complete lifecycle.

Operational Role

IEM governs the evaluation layer of integrity measurement by transforming objective measurement data into governed integrity assessments that support consistent operational, regulatory, and governance decision-making.

Minimum Implementation Framework

1. Define Integrity Evaluation Criteria

Identify the evaluation criteria, assessment objectives, evidence requirements, and governance principles used to determine integrity.

2. Define Evaluation Methodology

Establish standardized evaluation procedures, scoring logic, weighting methods, interpretation rules, and consistency requirements for every integrity assessment.

3. Define Evaluation Validation Logic

Define how evaluation results are verified for completeness, consistency, repeatability, objectivity, and governance compliance before acceptance.

4. Define Governance Response

Establish governance actions for acceptable evaluations, uncertain evaluations, degraded evaluations, failed evaluations, re-evaluation, escalation, and corrective actions.

5. Preserve Evaluation Records

Maintain evaluation methodologies, assessment results, supporting evidence, governance approvals, historical evaluations, revisions, and audit records throughout the complete lifecycle.

Example Use Cases

Use Case 1 — AI Governance Assessment

Scenario

An enterprise evaluates whether an AI system continues to satisfy governance requirements using integrity metrics, operational indicators, compliance evidence, and predefined thresholds.

Application

IEM applies the approved evaluation methodology to produce a standardized integrity assessment that supports governance decisions.

Result

Integrity is evaluated objectively using a repeatable governance methodology rather than subjective interpretation.

Use Case 2 — Aviation Safety Oversight

Scenario

An aviation authority evaluates the operational integrity of aircraft maintenance records, inspection history, safety compliance, and technical documentation.

Application

IEM integrates all integrity measurements and evidence into a governed evaluation process before determining operational acceptability.

Result

Aircraft integrity is assessed consistently using standardized governance evaluation procedures supported by objective evidence.

Canonical Closing Statement

Integrity is not determined by measurements alone but by their governed evaluation. Integrity Evaluation Module establishes the canonical governance process that transforms objective integrity measurements into consistent, evidence-based integrity assessments, enabling reliable governance decisions throughout the complete lifecycle of every governed entity.

OOF® MIP® Protection Notice
