

Integrity Response Authorization Module (IRAM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IRS-IRAM-2026-07-21-0001

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Response Standard (IRS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Response Authorization

Version: 1.0

Status: Canonical · Open Module

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Integrity Response Authorization

Canonical Definition

Integrity Response Authorization Module (IRAM) defines the governance framework for authorizing responses to verified integrity breaches. It establishes the authorization criteria, decision authorities, approval mechanisms, accountability requirements, and governance controls required to ensure that every integrity response is initiated by appropriately authorized entities and executed under approved governance conditions throughout the complete lifecycle of a governed entity.

Operational Role

IRAM governs the authorization layer of integrity response management by ensuring that no integrity response is initiated without documented authority, approved governance conditions, and accountable decision-making.

Minimum Implementation Framework

1. Define Response Authorization Criteria

Identify the governance conditions, breach classifications, severity thresholds, and operational circumstances that require authorization before response activities may begin.

2. Define Authorization Authorities

Establish who is authorized to approve, reject, delegate, or escalate integrity response activities and under which governance conditions those authorities may act.

3. Define Authorization Validation Logic

Define how response authorizations are verified for legitimacy, completeness, accountability, policy compliance, and consistency with the approved governance methodology.

4. Define Governance Response

Establish governance actions for approved authorizations, denied requests, delegated authority, emergency authorizations, authorization conflicts, and escalation procedures.

5. Preserve Authorization Records

Maintain authorization decisions, approvals, delegations, supporting evidence, timestamps, governance justifications, and audit documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Enterprise AI Governance

Scenario

A verified integrity breach requires the immediate suspension of autonomous decision-making within a production AI platform.

Application

IRAM determines the authorized decision-makers, validates emergency authority, records the approval, and authorizes containment actions according to the organization's governance policies.

Result

The response begins under documented authority with complete accountability and auditability.

Use Case 2 — Critical Infrastructure Operations

Scenario

A verified integrity breach affects operational control systems within a

national power grid.

Application

IRAM authorizes emergency response actions, validates executive authority, records governance approvals, and ensures that containment measures are initiated only by authorized personnel.

Result

Critical response activities are executed under controlled governance, preserving operational integrity, accountability, and regulatory compliance.

Canonical Closing Statement

Integrity Response Authorization Module establishes the canonical governance framework for authorizing integrity responses through documented authority, accountable decision-making, and approved governance conditions. It ensures that every integrity response begins with legitimate authorization, preserving governance integrity, operational control, and full auditability throughout the complete lifecycle of every governed entity.
