

Integrity Response Documentation Module (IRDM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IRS-IRDM-2026-07-21-0005

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Response Standard (IRS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Response Documentation

Version: 1.0

Status: Canonical · Open Module

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Response Documentation

Canonical Definition

Integrity Response Documentation Module (IRDM) defines the governance framework for documenting integrity response activities throughout their complete lifecycle. It establishes the documentation requirements, reporting structures, evidence management rules, record preservation principles, and governance controls required to ensure that every integrity response is recorded accurately, consistently, transparently, and remains fully auditable.

Operational Role

IRDM governs the documentation layer of integrity response management by preserving a complete, reliable, and traceable record of every authorized response action, governance decision, communication, and operational outcome.

Minimum Implementation Framework

1. Define Documentation Requirements

Identify the mandatory records, response actions, approvals, communications, evidence, timelines, participants, and governance decisions that must be documented during every integrity response.

2. Define Documentation Methodology

Establish standardized response reports, documentation templates, evidence references, version control, terminology, and record management procedures.

3. Define Documentation Validation Logic

Define how response documentation is verified for accuracy, completeness, consistency, traceability, evidentiary integrity, and compliance with the approved governance methodology.

4. Define Governance Response

Establish governance actions for incomplete documentation, missing evidence, documentation errors, revision requests, regulatory reporting requirements, and audit preparation.

5. Preserve Documentation Records

Maintain response reports, operational logs, approvals, communications, evidence, corrective actions, response timelines, closure reports, and audit archives throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Enterprise AI Operations

Scenario

An integrity breach requires a coordinated response across AI governance, cybersecurity, legal, and operational teams.

Application

IRDM documents every authorization, response action, communication, governance decision, operational outcome, and supporting evidence using standardized governance documentation.

Result

The complete integrity response remains transparent, traceable, legally defensible, and fully auditable.

Use Case 2 — Healthcare Critical Systems

Scenario

A verified integrity breach affects hospital information systems and requires regulatory reporting and post-incident review.

Application

IRDM governs the documentation of response activities, executive decisions, regulatory communications, corrective actions, and operational recovery records.

Result

The entire response lifecycle is preserved as a complete governance record, supporting accountability, compliance, continuous improvement, and future audits.

Canonical Closing Statement

Integrity Response Documentation Module establishes the canonical governance framework for documenting integrity response activities through standardized, accurate, transparent, and auditable governance records. It ensures that every authorized response remains fully traceable, evidence-based, and accountable throughout the complete lifecycle of every governed entity.
