

Integrity Response Execution Module (IREM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IRS-IREM-2026-07-21-0003

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Response Standard (IRS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Response Execution

Version: 1.0

Status: Canonical · Open Module

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Response Execution

Canonical Definition

Integrity Response Execution Module (IREM) defines the governance framework for executing authorized integrity response activities following a verified integrity breach. It establishes the execution procedures, operational controls, accountability requirements, monitoring mechanisms, and governance safeguards required to ensure that every response action is performed consistently, effectively, transparently, and in accordance with approved governance conditions throughout the complete lifecycle of a governed entity.

Operational Role

IREM governs the execution layer of integrity response management by ensuring that approved response actions are implemented correctly, monitored continuously, and performed under accountable governance.

Minimum Implementation Framework

1. Define Response Execution Requirements

Identify the approved response actions, execution priorities, operational dependencies, responsible entities, and governance conditions required for response implementation.

2. Define Execution Methodology

Establish standardized execution procedures, operational workflows, action sequencing, resource allocation, monitoring activities, and governance checkpoints.

3. Define Execution Validation Logic

Define how executed response activities are verified for effectiveness, completeness, consistency, timeliness, accountability, and compliance with the approved governance methodology.

4. Define Governance Response

Establish governance actions for execution failures, incomplete response activities, operational conflicts, unexpected outcomes, escalation events, and corrective interventions.

5. Preserve Execution Records

Maintain execution logs, operational evidence, governance approvals, action histories, monitoring results, corrective actions, timestamps, and audit documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Operations

Scenario

A verified integrity breach requires the immediate suspension of unauthorized autonomous decision-making within a production AI environment.

Application

IREM governs the execution of approved containment actions, monitors implementation, validates operational effectiveness, and documents every executed response activity.

Result

The integrity response is executed consistently, transparently, and under continuous governance oversight.

Use Case 2 — Banking Infrastructure

Scenario

A verified integrity breach compromises critical transaction processing

systems.

Application

IREM governs the execution of approved response procedures, including transaction isolation, operational containment, system stabilization, and continuous monitoring.

Result

Response activities are executed under controlled governance, minimizing operational disruption while preserving accountability and regulatory compliance.

Canonical Closing Statement

Integrity Response Execution Module establishes the canonical governance framework for executing authorized integrity response activities through controlled, accountable, transparent, and auditable operational actions. It ensures that every approved response is implemented consistently, effectively, and under continuous governance oversight throughout the complete lifecycle of every governed entity.
